Pathways to High-Tech Valleys and Research Triangles Willem Hulsink, J. J. M. Dons, 2008-05-23 About the book The contents of most of the chapters included in this volume were originally presented and discussed during the academic workshop High tech Valleys and Research Triangles in the East of the Netherlands and elsewhere held on 30 November and 1 December 2005 at the Wageningen International Congress Centre WICC in the Netherlands At that time we had an informal agreement with Rob Bogers series editor of the Wageningen UR Frontis book series that if the quality and quantity of the talks and papers at the seminar would be sufficient and if there was willingness among the potential authors an edited book volume based upon the results of the workshop would be a possibility After the workshop when we had a critical mass of ten chapters and a dedicated group of committed authors the book project was given the green light As editors we realized that there were still a couple of topics and themes missing and when we had found colleagues for these four additional chapters that needed to be written our Frontis book was on the roll Although most of the time it was great fun the whole process of writing reviewing rewriting editing and proofreading took a lot of time much more time than we originally had foreseen We would like to thank all authors of the fourteen chapters of this book for their excellent contributions

A Life Cycle for Clusters? Kerstin Press, 2006-09-05 rium states but on the development process following an external shock Kerstin Press adopts a new methodological approach She develops a

theoretic model of clusters change and adaptation that is based on the NK model of complex systems Kauffman 1993 Taking the existing insight on the dynamics of NK systems propositions on the influence of cluster architecture on adaptability are derived In a second step these propositions are tested by simulations comparing the adaptability of clusters with given differences in their architecture regarding the degree of division of labour on the one and the governance structure on the other hand Both aspects division of labour governance were found to matter for cluster adaptability in previous empirical studies but general causalities for their role in cluster adjustment could not be derived from individual case studies Within the all else held equal perspective adopted in the simulation model one explanation for how and when division of labour and governance matter for cluster adjustment is found While the model faces several limitations these are more to be seen as possible areas for future research The present study opens up new avenues in cluster research Rather than just focussing on emergence or existence clusters are viewed as entities underlying a dynamic development The analysis of their adaptability to external changes constitutes a first important step towards a non deterministic perspective on cluster development
