Power-Aware Testing and Test Strategies for Low Power Devices Patrick Girard, Nicola Nicolici, Xiaoqing Wen, 2010-03-11 Managing the power consumption of circuits and systems is now considered one of the most important challenges for the semiconductor industry Elaborate power management strategies such as dynamic voltage scaling clock gating or power gating techniques are used today to control the power dissipation during functional operation The usage of these strategies has various implications on manufacturing test and power aware test is therefore increasingly becoming a major

consideration during design for test and test preparation for low power devices This book explores existing solutions for power aware test and design for test of conventional circuits and systems and surveys test strategies and EDA solutions for testing low power devices *ERDA Energy Research Abstracts* United States.
