This was done because we thought and we leave this to the reader to decide that our work has attained over the years enough substance in order to justify a book. The problem which we soon faced was that the field still is moving at a fast pace for instance because hyper sonic computation problems became more and more important.

**Innovative Methods for Numerical Solutions of Partial Differential Equations** P. L. Roe, 2002. This book consists of 20 review articles dedicated to Prof Philip Roe on the occasion of his 60th birthday and in appreciation of his original contributions to computational fluid dynamics. The articles written by leading researchers in the field cover many topics including theory and applications, algorithm developments and modern computational techniques for industry.
