Workshop Machining David Harrison, 2021-12-14 *Workshop Machining* is a comprehensive textbook that explains the fundamental principles of manually operating machinery to form shapes in a variety of materials. It bridges the gap between people who have traditional toolmaking skills and those who have been trained in programming and operation of CNC machines in a focused production environment rather than general machine shop. Using a subject-based approach, David Harrison intuitively guides readers and supplies practical skills. The chapters cover everything from the basic machine controls to advanced cutting operations using a wide range of tooling and work holding devices. Theory and practice are shown via a mixture of diagrams, text, and illustrated worked examples as well as through exercises. The book is ideal for students and lecturing staff who participate in or lead practical machining sessions and for those who wish to further develop their machining skills. It also serves as an excellent reference to understand the principles and limitations of producing shapes with cutters that move in a limited combination of linear and radial paths.

Research into Design for a Connected World Amaresh Chakrabarti, 2019-01-08 This book showcases cutting edge research papers from the 7th International Conference on Research into Design ICoRD 2019, the largest in India in this area, written by eminent researchers from across the world on design processes, technologies, methods, and tools, and their impact on innovation for supporting design for a connected world. The theme of ICoRD 19 has been Design for a Connected World. While Design traditionally focused on developing products that worked on their own, an emerging trend is to have products with a smart layer that makes them context aware and responsive individually and collectively through collaboration with other physical and digital objects with which these are connected. The papers in this volume explore these themes, and their key focus is connectivity: how do products and their development change in a connected world? The volume will be of interest to researchers, professionals, and entrepreneurs working in the areas of industrial design, manufacturing, consumer goods, and industrial management who are interested in the use of emerging technologies such as IOT, IIOT, Digital Twins, II4.0 etc., as well as new and emerging methods and tools to design new products, systems, and services.
