**THE FUTURE OF FINANCIAL TECHNOLOGY Integrating Generative AI, Agentic Systems, and Secure Data Engineering in the Public and Private Sectors** Abhishek Dodda, The Economic World Arthur Richmond Marsh, 1919

**Politics, Finance and the Role of Economics** C. D. Foster, 2019-01-25 Originally published in 1971 when nationalized industries employed about 7 per cent of the national labour force created about 10 per cent of the gross domestic product and had annual investment programmes which were equal to those of all private manufacturing put together Even this understates the scope of public enterprise at the time since there were many other organizations ranging from the BBC to the Public Trustee which were semi autonomous public enterprises but not nationalized industries Moreover the public enterprise sector continued to grow even under Conservative governments and there were many reasons for thinking that no government would succeed in reversing this trend for it was felt unlikely that as government became more complex it would disgorge many new activities which would be given a semi autonomous that is public enterprise status The author drawing on personal experience shows that the facts of ministerial and parliamentary control were very different from what the public and Parliament thought at the time He describes the very great practical independence of the Boards and also how much Ministers had come to rely on persuasion which not only can impose serious waste of time and money on both Boards and Government but is also inefficient Ministers have least power where the aims of public enterprise are social

rather than commercial. If there were no changes, the growth of public enterprise to achieve social purposes would mean an important decline in the power of Parliament and Ministers. This book explores solutions to this problem and concludes that the government must build up a cadre and capacity for financial control which at the time were lacking to it. **Econophysics of Agent-Based Models** Frédéric Abergel, Hideaki Aoyama, Bikas K. Chakrabarti, Anirban Chakraborti, Asim Ghosh, 2013-09-07 The primary goal of this book is to present the research findings and conclusions of physicists, economists, mathematicians, and financial engineers working in the field of Econophysics, who have undertaken agent-based modelling, comparison with empirical studies, and related investigations. Most standard economic models assume the existence of the representative agent who is perfectly rational and applies the utility maximization principle when taking action. One reason for this is the desire to keep models mathematically tractable; no tools are available to economists for solving non-linear models of heterogeneous adaptive agents without explicit optimization. In contrast, multi-agent models, which originated from statistical physics considerations, allow us to go beyond

the prototype theories of traditional economics involving the representative agent This book is based on the Econophys Kolkata VII Workshop at which many such modelling efforts were presented In the book leading researchers in their fields report on their latest work consider recent developments and review the contemporary literature
