The Objective Monitoring of Physical Activity: Contributions of Accelerometry to Epidemiology, Exercise Science and Rehabilitation Roy J. Shephard, Catrine Tudor-Locke, 2016-08-02 This book examines the new knowledge that has been gained from the objective monitoring of habitual physical activity by means of pedometers and accelerometers It reviews current advances in the technology of activity monitoring and details advantages of objective monitors relative to physical activity questionnaires It points to continuing gaps in knowledge and explores the potential for further advances in the design of objective monitoring devices Epidemiologists have studied relationships between questionnaire assessments of habitual physical activity and various medical conditions for some seventy years In general they have observed positive associations between regular exercise and good health but because of inherent limitations in the reliability and accuracy of physical activity questionnaires optimal exercise recommendations for the prevention and treatment of disease have remained unclear Inexpensive pedometers and accelerometers now offer the epidemiologist the potential to collect relatively precisely graded and objective information on the volume intensity and patterns of effort that people are undertaking to relate this data to past and future health experience and to establish dose response relationships between physical activity and the various components of health Such information is important both in assessing the causal nature of the observed associations and in establishing evidence based recommendations concerning the minimal levels of daily physical activity needed to maintain good health

Mobile e-Health Hannah R. Marston, Shannon Freeman, Charles Musselwhite, 2017-12-01 This multi disciplinary collection of essays captures discussion thinking and research surrounding the recent surge of interest in how technology can help us as we age A wide range of topics are covered from investigations in the use of technology to improve health and well being to examinations of digital gaming mobile health apps and the quantified self in relation to an ageing population From multi disciplinary perspectives this collection highlights the role of a more social approach to technology As such a variety of social research methods are used throughout the chapters The benefits and issues with different approaches are highlighted both in terms of further research but also so the reader can judge the value of the research for themselves This collection brings together the latest thinking and cutting edge contemporary research from leading thinkers and academics in the field of human computer interaction health and gerontology In taking a social approach it highlights how technological practices fit within wider gerontological political and cultural perspectives It therefore has potential to influence those working in human computer interaction digital humanities sociology psychology and gerontology It can help change the practice of people working in the health and social care field in computer and product design and in the digital and creative industries
