Gender Structured Population Modeling Gender Structured Population Modeling:

Gender-structured Population Modeling M. Iannelli, M. Martcheva, F. A. Milner, 2005-01-01 Gender Structured Population Modeling gives a unified presentation of and mathematical framework for modeling population growth by couple formation It provides an overview of both past and present modeling results The authors focus on pair formation marriage and two sex models with different forms of the marriage function the basis of couple formation and discuss which of these forms might make a better choice for a particular population the United States The book also provides results on model analysis gives an up to date review of mathematical demography discusses numerical methods and puts deterministic modeling of human populations into historical perspective

Structured Population Models in Biology and Epidemiology Pierre Magal, Shigui Ruan, 2008-04-12 In this new century mankind faces ever more challenging environmental and public health problems such as pollution invasion by exotic species the emergence of new diseases or the emergence of diseases into new regions West Nile virus SARS Anthrax etc and the resurgence of existing diseases in uenza malaria TB HIV AIDS etc Mathematical models have been successfully used to study many biological epidemiological and medical problems and nonlinear and complex dynamics have been observed in all of those contexts Mathematical studies have helped us not only to better understand these problems but also to find solutions in some cases such as the prediction and control of SARS outbreaks understanding HIV infection and the investment of antibiotic resistant infections in hospitals Structured population models distinguish individuals from one another according to characteristics such as age size location status and movement to determine the birth growth and death rates interaction with each other and with environment infectivity etc The goal of structured population models is to understand how these characteristics affect the dynamics of these models and thus the outcomes and consequences of the biological and epidemiological processes There is a very large and growing body of literature on these topics This book deals with the recent and important advances in the study of structured population models in biology and epidemiology There are six chapters in this book written by leading researchers in these areas

Spaces of Measures and their Applications to Structured Population Models Christian Düll, Piotr Gwiazda, Anna Marciniak-Czochra, Jakub Skrzeczkowski, 2021-10-07 Presents a comprehensive analytical framework for structured population models in spaces of Radon measures and their numerical approximation

[Age-Structured Population Dynamics in Demography and Epidemiology](#) Hisashi Inaba, 2017-03-15 This book is the first one in which basic demographic models are rigorously formulated by using modern age structured population dynamics extended to study real world population problems Age structure is a crucial factor in understanding population phenomena and the essential ideas in demography and epidemiology cannot be understood without mathematical formulation therefore this book gives readers a robust mathematical introduction to human population studies In the first part of the volume classical demographic models such as the stable population model and its linear extensions density dependent nonlinear models and pair formation models are

formulated by the McKendrick partial differential equation and are analyzed from a dynamical system point of view In the second part mathematical models for infectious diseases spreading at the population level are examined by using nonlinear differential equations and a renewal equation Since an epidemic can be seen as a nonlinear renewal process of an infected population this book will provide a natural unification point of view for demography and epidemiology The well known epidemic threshold principle is formulated by the basic reproduction number which is also a most important key index in demography The author develops a universal theory of the basic reproduction number in heterogeneous environments By introducing the host age structure epidemic models are developed into more realistic demographic formulations which are essentially needed to attack urgent epidemiological control problems in the real world

Structured-Population Models in Marine, Terrestrial, and Freshwater Systems Shripad Tuljapurkar, Hal Caswell, 2012-12-06 In the summer of 1993 twenty six graduate and postdoctoral students and fourteen lecturers converged on Cornell University for a summer school devoted to structured population models This school was one of a series to address concepts cutting across the traditional boundaries separating terrestrial marine and freshwater ecology Earlier schools resulted in the books Patch Dynamics S A Levin T M Powell a book on food webs is in preparation Models of population structure differences among individuals due to age size developmental stage spatial location or genotype have an important place in studies of all three kinds of ecosystem In choosing the participants and lecturers for the school we selected for diversity biologists who knew some mathematics and mathematicians who knew some biology field biologists sobered by encounters with messy data and theoreticians intoxicated by the elegance of the underlying mathematics people concerned with long term evolutionary problems and people concerned with the acute crises of conservation biology For four weeks these perspectives swirled in discussions that started in the lecture hall and carried on into the sweltering Ithaca night Diversity may not increase stability but it surely makes things interesting

Dynamic Population Models Robert Schoen, 2007-05-05 Dynamic Population Models is the first book to comprehensively discuss and synthesize the emerging field of dynamic modeling Incorporating the latest research it includes thorough discussions of population growth and momentum under gradual fertility declines the impact of changes in the timing of events on fertility measures and the complex relationship between period and cohort measures The book is designed to be accessible to those with only a minimal knowledge of calculus

Integrated Population Biology and Modeling Part B, 2019-02-05 Integrated Population Biology and Modeling Part B Volume 40 offers very delicately complex and precise realities of quantifying modern and traditional methods of understanding populations and population dynamics with this updated release focusing on Prey predator animal models Back projections Evolutionary Biology computations Population biology of collective behavior and bio patchiness Collective behavior Population biology through data science Mathematical modeling of multi species mutualism new insights remaining challenges and applications to ecology Population Dynamics of Manipur Stochastic Processes and Population Dynamics Models The Mechanisms for Extinction Persistence and

A Two-sex, Age-structured Population Model in Discrete-time Stephen Eric Tennenbaum, 2006

Computational And Mathematical Population Dynamics Necibe Tuncer, Maia Martcheva, Olivia Prosper, Lauren Childs, 2023-06-21 This book is a collection of works that represent the recent advancements in computational and mathematical methods applied to population dynamics It concentrates on both development of new tools as well as on innovative use of existing tools to obtain new understanding of biological systems The volume introduces new state of the art techniques for defining and solving numerically control problems in mathematical biology in which the control appears linearly Such problems produce simpler optimal controls that can be implemented in practice The book further develops tools for fitting multi scale models to multi scale data and studying the practical identifiability of the parameters from multi scale data Novel model of Zika with Wolbahia infection in mosquitoes suggests that the most suitable control strategy to control Zika in the absence of Wolbahia is killing mosquitoes but the most suitable strategy when mosquitoes are Wolbahia infected is the treatment of humans A completely novel methodology of developing discrete continuous hybrid models of multi species interactions is also introduced together with avantgarde techniques for discrete continuous hybrid models analysis A mathematical model leads to new observations of the within host virus dynamics and its interplay with the immune responses In particular it is observed that the parameters promoting CTL responses need to be boosted over parameters promoting antibody production to obtain a biologically relevant steady state A novel stochastic model of COVID 19 investigates quarantine and lock down as important strategies for control and elimination of COVID 19

Cardiovascular and Respiratory Systems Jerry J. Batzel, Franz Kappel, Daniel Schneditz, Hien T. Tran, 2007-09-20 Cardiovascular and Respiratory Systems Modeling Analysis and Control uses a principle based modeling approach and analysis of feedback control regulation to elucidate the physiological relationships Models are arranged around specific questions or conditions such as exercise or sleep transition and are generally based on physiological mechanisms rather than on formal descriptions of input output behavior The authors ask open questions relevant to medical and clinical applications and clarify underlying themes of physiological control organization Current problems key issues developing trends and unresolved questions are highlighted Researchers and graduate students in mathematical biology and biomedical engineering will find this book useful It will also appeal to researchers in the physiological and life sciences who are interested in mathematical modeling

Smart Material Systems Ralph C. Smith, 2005-03-01 This book describes several novel applications currently under investigation that exploit the unique actuator and sensor capabilities of smart material compounds In addition to present and projected applications this book provides comprehensive coverage of both linear and nonlinear modeling techniques necessary to characterize materials in a manner that facilitates transducer design and control development The author focuses on ferroelectric magnetic and shape memory compounds and also addresses applications exploiting amorphous and ionic polymers magnetorheological compounds and fiber optic sensors By providing a unified treatment of both linear and nonlinear characterization frameworks Smart Material Systems Model Development encompasses both low to moderate drive levels which constitute the primary focus of most present texts and the high drive regimes dictated by present and future applications This will significantly enhance the design of transducers and control systems which exploit the unique actuator and sensor capabilities provided by smart material compounds
