Waves in Philosophical Logic G. Restall, G. Russell, 2012-07-31 Philosophical logic has been and continues to be a driving force behind much progress and development in philosophy more broadly This collection by up and coming philosophical logicians deals with a broad range of topics including for example proof theory probability context sensitivity dialetheism and dynamic semantics

Logicism Renewed Paul C. Gilmore, 2017-03-30 Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians Many of the original books in the series have been unavailable for years but they are now in print once again Logicism as put forward by Bertrand Russell was predicated on a belief that all of mathematics can be deduced from a very small number of fundamental logical principles In this volume the twenty third publication in the Lecture Notes in Logic series Paul C Gilmore revisits logicism in light of recent advances in mathematical logic and theoretical computer science Gilmore addresses the need for languages which can be understood by both humans and computers and using Intensional Type Theory ITT provides a unified basis for mathematics and computer science This yields much simpler foundations for recursion theory and the semantics of computer programs than those currently provided by category theory

Reasoning Web. Web Logic Rules Wolfgang Faber, Adrian Paschke, 2015-07-17 This volume contains the lecture notes of the 11th Reasoning Web Summer School 2015 held in Berlin Germany in July August 2015 In 2015 the theme of the school was Web Logic Rules This Summer School is devoted to this perspective and provides insight into the semantic Web linked data ontologies rules and logic

Neighborhood Semantics for Modal Logic Eric Pacuit, 2017-11-15 This book offers a state of the art introduction to the basic techniques and results of neighborhood semantics for modal logic In addition to presenting the relevant technical background it highlights both the pitfalls and potential uses of neighborhood models an interesting class of mathematical structures that were originally introduced to provide a semantics for weak systems of modal logic the so called non normal modal logics In addition the book discusses a broad range of topics including standard modal logic results i.e completeness decidability and definability bisimulations for neighborhood models and other model theoretic constructions comparisons with other semantics for modal

logic e.g relational models topological models plausibility models neighborhood semantics for first order modal logic applications in game theory coalitional logic and game logic applications in epistemic logic logics of evidence and belief and non normal modal logics with dynamic modalities The book can be used as the primary text for seminars on philosophical logic focused on non normal modal logics as a supplemental text for courses on modal logic logic in AI or philosophical logic either at the undergraduate or graduate level or as the primary source for researchers interested in learning about the uses of neighborhood semantics in philosophical logic and game theory Foundations of the Formal Sciences II Benedikt Löwe,Wolfgang Malzkorn,Thoralf Räsch,2013-04-17 Foundations of the Formal Sciences FotFS is a series of interdisciplinary conferences in mathematics philosophy computer science and linguistics The main goal is to reestablish the traditionally strong links between these areas of research that have been lost in the past decades The second conference in the series had the subtitle Applications of Mathematical Logic in Philosophy and Linguistics and brought speakers from all parts of the Formal Sciences together to give a holistic view of how mathematical methods can improve our philosophical and technical understanding of language and scientific discourse ranging from the theoretical level up to applications in language recognition software Audience This volume is of interest to all formal philosophers and theoretical linguists In addition to that logicians interested in the applications of their field and logic students in mathematics computer science philosophy and linguistics can use the volume to broaden their knowledge of applications of logic **Foundations of Information and Knowledge Systems** Sebastian Link,Henri Prade,2010-03-02 This volume constitutes the thoroughly refereed post conference proceedings of the Sixth International Symposium on Foundations of Information and Knowledge Systems FoIKS 2010 which was held in Sofia Bulgaria in February 2010 The 19 revised full papers presented together with three invited talks were carefully reviewed and selected from 50 papers **Logic, Rationality, and Interaction** Wiebe van der Hoek,Wesley H. Holliday,Wen-fang Wang,2015-10-28 FoLLI LNCS is the publication platform for the Association of Logic Language and Information FoLLI www folli org The Association was founded in 1991 to advance research and education on the interface between logic linguistics computer science and cognitive science The FoLLI Publications on Logic Language and Information aim to disseminate results of cutting edge research and tutorial materials in these interdisciplinary areas This LNCS volume is part of FoLLi book serie and contains the papers presented at the 5th International Workshop on Logic Rationality and Interaction LORI V held in October 2015 in Taipei Taiwan The topics covered in this program well represent the span and depth that has by now become a trademark of the LORI workshop series where logic interfaces with disciplines as diverse as game theory and decision theory philosophy and epistemology linguistics computer science and artificial intelligence Automated Reasoning with Analytic Tableaux and Related Methods Revantha Ramanayake,Josef Urban,2023-09-13 This open access book constitutes the proceedings of the proceedings of the 32nd International Conference on Automated Reasoning with Analytic Tableaux and Related Methods TABLEUX 2023 held in Prague Czech

Republic during September 18-21, 2023. The 20 full papers and 5 short papers included in this book together with 5 abstracts of invited talks were carefully reviewed and selected from 43 submissions. They present research on all aspects of the mechanization of reasoning with tableaux and related methods. The papers are organized in the following topical sections: tableau calculi, sequent calculi, theorem proving, non wellfounded proofs, modal logics, linear logic, and MV algebras, separation logic, and first order logics.

Proof Analysis Sara Negri, Jan von Plato, 2011-09-29. This book continues from where the authors' previous book *Structural Proof Theory* ended. It presents an extension of the methods of analysis of proofs in pure logic to elementary axiomatic systems and to what is known as philosophical logic. A self-contained brief introduction to the proof theory of pure logic is included that serves both the mathematically and philosophically oriented reader. The method is built up gradually with examples drawn from theories of order lattice theory and elementary geometry. The aim is in each of the examples to help the reader grasp the combinatorial behaviour of an axiom system which typically leads to decidability results. The last part presents as an application and extension of all that precedes it a proof theoretical approach to the Kripke semantics of modal and related logics with a great number of new results providing essential reading for mathematical and philosophical logicians.

Handbook of Tableau Methods M. D'Agostino, Dov M. Gabbay, Reiner Hähnle, J. Posegga, 2013-03-09 Recent years have been blessed with an abundance of logical systems arising from a multitude of applications A logic can be characterised in many different ways Traditionally a logic is presented via the following three components 1 an intuitive non formal motivation perhaps tie it in to some application area 2 a semantical interpretation 3 a proof theoretical formulation There are several types of proof theoretical methodologies Hilbert style Gentzen style goal directed style labelled deductive system style and so on The tableau methodology invented in the 1950s by Beth and Hintikka and later perfected by Smullyan and Fitting is today one of the most popular since it appears to bring together the proof theoretical and the semantical approaches to the pre of a logical system and is also very intuitive In many universities it is sentation the style first taught to students Recently interest in tableaux has become more widespread and a community crystallised around the subject An annual tableaux conference is being held and proceedings are published The present volume is a Handbook a Tableaux pre senting to the community a wide coverage of tableaux systems for a variety of logics It is written by active members of the community and brings the reader up to frontline research It will be of interest to any formal logician from any area

 revision and paraconsistency The Functional Interpretation of Logical Deduction Ruy J. G. B. de Queiroz, Anjolina G. de
 Oliveira, Dov M. Gabbay, 2012 This comprehensive book provides an adequate framework to establish various calculi of logical
 inference Being an enriched system of natural deduction it helps to formulate logical calculi in an operational manner By
 uncovering a certain harmony between a functional calculus on the labels and a logical calculus on the formulas it allows
 mathematical foundations for systems of logic presentation designed to handle meta level features at the object level via a
 labelling mechanism such as the D Gabbay's Labelled Deductive Systems The book truly demonstrates that introducing labels
 is useful to understand the proof calculus itself and also to clarify its connections with model theoretic interpretations
