Clarity

Clarity Refers to the presence of inclusions in a diamond. Inclusions are natural identifying characteristics such as minerals or fractures, appearing while diamonds are formed deep beneath the earth's crust. They may look like tiny crystals, clouds or feathers. The clarity scale, ranging from F (Flawless) to Included (I), is based on the visibility of inclusions at a magnification of 10x.

Color

The classification of body color of diamonds Extends from D (colorless) to Z (light yellow or brown) . Color grades are determined by comparing each diamond to a master set. Each letter grade represents a range of color and is a measure of how noticeable a color is.

Cut

Diamonds can be cut in various shapes (e.g. square, pear or heart). The round brilliant is probably the best known shape.

ROUND

PRINCESS

RADIANT

Fire, brilliancy and scintillation of a diamond are largely determined by the proportions of various parts of the stone. Finish grade mainly evaluates the symmetry.

Manual of Examinations for the Fall of 1911 United States Civil Service Commission,1911 Artificial Intelligence in Design '02 Asko Riitahuhta,2013-04-17 One of the foundations for change in our society comes from designing Its genesis is the notion that the world around us either is unsuited to our needs or can be improved The need for designing is driven by a society's view that it can improve or add value to human existence well beyond simple subsistence As a consequence of designing the world which we inhabit is increasingly a designed rather than a naturally occurring one In that sense it is an artificial world Designing is a fundamental precursor to manufacturing fabrication construction or implementation Design research aims to develop an understanding of designing and to produce models of designing that can be used to aid designing Artificial intelligence has provided an environmental paradigm within which design research based on computational constructions can be carried out Design research can be carried out in variety of ways It can be viewed as largely an empirical endeavour in which experiments are designed and executed in order to test some hypothesis about some design phenomenon or design behaviour This is the approach adopted in cognitive science It often manifests itself through the use of protocol studies of designers The results of such research form the basis of a computational model A second view is that design research can be carried out by positing axioms and then deriving consequences from them *Namibia* George J. Coakley,1983 Prepared by the US Bureau of Mines with the purpose of providing the latest available data and information on mining and mineral resources in Namibia this is a well informed and useful reference work The study covers regional geology the history of exploitation mining policies and legislation production including detailed tables on production and reserves 1970 1981 as well as water resources energy supply labour and transport It argues that uranium has the greatest potential for long term growth and that elsewhere a pattern of diminishing ore reserves in the metals and to a lesser extent diamonds suggests a declining resource base Shortages of water supplies lack of artisans and skilled labour and the unresolved international dispute are identified as constraints to future growth in Namibia's mining industry There is a chapter outlining the main features of mining legislation and a lengthy mainly technical bibliography listing close to 200 items As a technical and economic survey relying heavily on information provided by the mining companies themselves the study has considerable value As a guide to the political economy of Namibia it is however quite misleading The UN Decree No 1 of 1974 is not mentioned at all while two decades of worker organization liberation struggle and harsh colonial repression are dismissed in the assertion that differences among worker languages and interests have inhibited the formation of a uniform political party or union The study is notably weak on labour and social conditions wages and labour legislation For up to date information along the same lines see Bureau of Mines Minerals Yearbook vol III Area Reports International which contains a chapter on the mineral industry of Namibia Eriksen Moorsom 1989 **Dictionary of Gems and Gemology** Mohsen

Manutchehr-Danai, 2013-03-09 Since World War II the amount of information generated in the science of Gemology has increased tremendously Therefore this book Dictionary of Gems and Gemology was written with the aim of providing a relatively complete dictionary to assist all students hobbyists scientists and interested parties in the fields of Gems and Gemology The forerunner to this book was called Dictionary of Gems and Gemology English Persian Persian English published in Tehran Iran in 1997 It was written with the aid of more than thirty reference books relating to gemology In response to the effort required to clarify the terms within I decided to compile a book that brings all the relevant terms into one book This new book eliminates the use of different reference books and compiles nearly all the relevant terms into a one stop useful text It took twenty five years to collect the terms and the information so as to present a complete and functional lexicon The text is supported by nearly 170 illustrations and 21 tables to provide detailed and succinct information I hope and trust that this book will reach the high standard of other gemological dictionaries If you have criticisms or suggestions please feel free to contact me Professor Dr Mohsen Manutchehr Danai Los Angeles Tehran Regensburg Acknowledgments The author acknowledges all those who were of valuable assistance during the writing and publishing of this book
