Epidemiologic Studies In Cancer Prevention And Screening Statistics For Biology And Health:

Epidemiologic Studies in Cancer Prevention and Screening Anthony B. Miller, 2012-11-30 Epidemiologic Studies in Cancer Prevention and Screening is the first comprehensive overview of the evidence base for both cancer prevention and screening This book is directed to the many professionals in government academia public health and health care who need up to date information on the potential for reducing the impact of cancer including physicians nurses epidemiologists and research scientists The main aim of the book is to provide a realistic appraisal of the evidence for both cancer prevention and cancer screening In addition the book provides an accounting of the extent programs based on available knowledge have impacted populations It does this through 1 Presentation of a rigorous and realistic evaluation of the evidence for population based interventions in prevention of and screening for cancer with particular relevance to those believed to be applicable now or on the cusp of application 2 Evaluation of the relative contributions of prevention and screening 3 Discussion of how within the health systems with which the authors are familiar prevention and screening for cancer can be enhanced Overview of the evidence base for cancer prevention and screening as demonstrated in Epidemiologic Studies in Cancer Prevention and Screening is critically important given current debates within the scientific community Of the five components of cancer control prevention early detection including screening treatment rehabilitation and palliative care prevention is regarded as the most important Yet the knowledge available to prevent many cancers is incomplete and even if we know the main causal factors for a cancer we often lack the understanding to put this knowledge into effect Further with the long natural history of most cancers it could take many years to make an appreciable impact upon the incidence of the cancer Because of these facts many have come to believe that screening has the most potential for reduction of the burden of cancer Yet through trying to apply the knowledge gained on screening for cancer the scientific community has recognized that screening can have major disadvantages and achieve little at substantial cost This reduces the resources that are potentially available both for prevention and for treatment *Cancer Epidemiology and Prevention* David Schottenfeld, Joseph F. Fraumeni Jr., 2006-08-24 This much anticipated Third Edition provides a comprehensive presentation of the global burden and patterns of cancer occurrence along with new developments in our understanding of cancer causation and prevention Special attention is given to epidemiologic approaches that incorporate molecular biomarkers based on genomic and other emerging technologies providing new insights into the role of genetic predisposition and gene environment interactions in cancer induction In addition new chapters are included on social class disparities in cancer incidence and mortality the role of obesity and physical inactivity in cancer etiology the potential effects of electromagnetic fields and radiofrequency radiation and the principles of cancer chemoprevention The textbook is organized into five sections Basic Concepts The Magnitude of Cancer The Causes of Cancer Cancer by Tissue of Origin Cancer Prevention and Control In this new edition Drs David Schottenfeld and Joseph F Fraumeni Jr have enlisted three distinguished Associate Editors Drs Jonathan Samet of Johns Hopkins
