

**Additional Lab 8 Ecosystems and Speciation**

---

**Problem**

How does a founding population adapt to new environmental conditions?

**Introduction**

When the hurricane's winds died down, a small lizard crawled out of her hiding place in the branches of a mangrove tree. Her home was now part of a tangled mat of vegetation floating on the surface of the ocean. She shared the mat with insects and slugs, as well as other lizards from her own species. After a week, ocean currents pushed the mat onto the shore of a small, isolated island. The hungry lizards crept ashore in search of food.

In this lab, your teacher will give you a description of the island on which the lizards landed. You will be asked to suggest how the descendants of the founding population may adapt over time to their new environment.
