graphical CDI shows your position at the center of the indicator, relative to your course (the moving course deviation needle). As with a traditional aural CDI, when you're off course simply steer toward the needle. The CDI arrow in the center of the scale indicates whether you are heading to (arrow) the waypoint or if you have passed the waypoint (a down arrow).

NOTE The GMC 429 always navigates PD's supported unless the ODS search is set (preventing automatic supported responding), or you have moved the last supported to your Backstop.
