

$$S_{av} = S_{nl} - \left[\left(\frac{\text{Available KW Load}}{\text{Rated KW}} \right) \times (S_{fl} - S_{nl}) \right]$$

Where

S_{av} = Speed at Available KW Load

S_{fl} = Speed at Full KW Load

S_{nl} = Speed at No Load

Example

Available KW Load = 400

Rated KW = 500

Speed at Full KW Load = 1800

Speed at No Load = 1854

$$S_{av} = 1854 - \left[\left(\frac{400}{500} \right) \times (1854 - 1800) \right]$$

$$S_{av} = 1811 \text{ RPM}$$

6. To calculate the operating (governed) speed under the available load for droop operation, when the full KW load is not available, use this formula.

NOTE: The engine speed in RPM is equal to 30 times the frequency (Hz). At 60.0 Hz, the engine speed = 30 X 60 = 1800 RPM.

Fine Speed Adjustment

After the gain adjustment is made, the full load governed engine speed may require a minor adjustment to equal the desired speed (i.e. 60 Hz, 1800 RPM or 50 Hz, 1500 RPM). Use the SPEED ADJUST potentiometer on the engine instrument panel for fine speed adjustments of less than ± 100 RPM.

System Adjustment Remote Mounted Governor Control

Follow the panel mounted governor control instructions for setting the governed speed, idle, droop and gain on the remote mounted control. The wiring for the remote mounted control is shown.

Caution: Do not attach the battery negative to Terminal Number 11. The control circuitry will be damaged.

Motor Truck Engineering Handbook James Fitch, 1993-11-01 This fourth edition updates the basic truck engineering data from previous editions and introduces the latest advancements in electronic applications to truck power trains and operations assuring optimum performance and economy with a safer and cleaner environment Useful data from official government tests on anti lock brakes and traction enhance this edition Likewise environmental concerns are addressed through the use of non polluting vehicles using alternative fuels and electrical energy
