Coastal Wetlands Gerardo Perillo, Eric Wolanski, Donald R Cahoon, Charles S Hopkins, 2018-11-02 Coastal Wetlands Second Edition An Integrated and Ecosystem Approach provides an understanding of the functioning of coastal ecosystems and the ecological services that they provide As coastal wetlands are under a great deal of pressure from the dual forces of rising sea levels and the intervention of human populations both along the estuary and in the river catchment this book covers important issues such as the destruction or degradation of wetlands from land reclamation and infrastructures impacts from the discharge of pollutants changes in river flows and sediment supplies land clearing and dam operations Covers climate change and its influence on coastal wetland form and function Provides a fully updated and expanded resource including new chapters on modeling management and the impact of climate change Contains full color figures of wetlands and estuaries in different parts of the world

Coastal Wetlands Gerardo M.E. Perillo, Eric Wolanski, Donald R. Cahoon, Mark M. Brinson, 2009-01-18 Coastal wetlands are under a great deal of pressure from the dual forces of rising sea level and the intervention of human populations both along the estuary and in the river catchment Direct impacts include the destruction or degradation of wetlands from land reclamation and infrastructures Indirect impacts derive from the discharge of pollutants changes in river flows and sediment supplies land clearing and dam operations As sea level rises coastal wetlands in most areas of the world migrate landward to occupy former uplands The competition of these lands from human development is intensifying making the landward migration impossible in many cases This book provides an understanding of the functioning of coastal ecosystems and the ecological services that they provide and suggestions for their management In this book a CD is included containing color figures of wetlands and estuaries in different parts of the world Includes a CD containing color figures of wetlands and estuaries in different parts of the world

Mudie, 2014-03-27 Salt marshes and mangrove forests the intertidal wetlands of the world s coastlines provide key ecological services to all areas of the globe This cutting edge richly illustrated book introduces the essential elements of coastal wetlands and their applications The book opens by introducing coastal oceanography the physical features of wetlands their ecology and human impacts upon them giving all students the necessary background for wetlands studies It then presents detailed case studies from around the world with extensive illustrations supplying a wider global scale picture of wetlands geomorphology and biodiversity The final chapters discuss some unique applications of coastal wetlands including geological monitoring uses in biotechnology and agriculture and various experimental mesocosms This is ideal as supplementary reading to support students on a wide range of earth and life science courses from environmental science ecology and palaeoecology to geomorphology and geography It will also be a valuable interdisciplinary reference for researchers

Coastal Wetlands:

Alteration and Remediation Charles W. Finkl, Christopher Makowski, 2017-07-18 This book delves into human induced and natural impacts on coastal wetlands intended or otherwise through a series of vignettes that elucidate the environmental insults and efforts at amelioration and remediation The alteration and subsequent restoration of wetland habitats remain key issues among coastal scientists These topics are introduced through case studies and pilot programs that are designed to better understand the best practices of trying to save what is left of these fragile ecosystems Local approaches as well as national and international efforts to restore the functionality of marsh systems are summarily approached and evaluated by their efficacy in producing resilient reclamations in terms of climate smart habitat conservation The outlook of this work is global in extent and local by intent Included here in summarized form are professional opinions of experts in the field that investigate the crux of the matter which proves to be human pressure on coastal wetland environments Even though conservation and preservation of these delicate environmental systems may be coming at a later date many multi pronged approaches show promise through advances in education litigation and engineering to achieve sustainable coastal systems The examples in this book are not only of interest to those working exclusively with coastal wetlands but also to those working to protect the surrounding coastal areas of all types

Sediment Transport Research - Further Recent Advances Andrew J. Manning, 2024-08-21 The effective governance and administration of many aquatic and terrestrial environments requires a detailed understanding of sediment transport and its behavioral dynamics This has both environmental and economic implications especially where there is any anthropogenic involvement Sedimentary processes such as erosion scour deposition and consolidation can fluctuate depending on whether their compositional matrix is purely cohesive noncohesive or a combination of both types With many contributing factors the prediction of sedimentary movement is often made using numerical modeling tools as they can estimate the various spatial and temporal fluxes However due to the complex behavior of natural sediments scientists and other specialists continue to conduct research into the many aspects that influence sediment transport

Sediment Transport Research Further Recent Advances is a book that draws on the most recent world class scientific research on sediment transport topics including computational fluid dynamics numerical modeling particle properties and characteristics beach morphology soil erosion flocculation processes sand nourishment geomorphology water quality aspects sedimentary related legislation and many more The research was carried out by researchers who specialize in sediment transport and related processes
