**Read all instructions carefully and completely before installing your new Fi2000AT module. It is recommended that a qualified mechanic or technician install this product.**

**Before installing it is recommended that the fuel tank be low on fuel.**

1. Remove the seat by turning the ignition key entirely to the left side. Then first remove the painted left then right hand side cover from behind the engine, secured with large button head screws on each side. There is a M6 Hex screw hidden between the covers, which must be removed before removing the right cover.
2. Remove the three buttonhead screws retaining the instrument cluster on top of the fuel tank, once the bezel is free disconnect the two harness connectors located just to the front of the fuel tank, remove the bezel entirely to prevent it from scratching the fuel tank.
3. Remove the 10mm Cap nut and bolt retaining the rear of the fuel tank. Once removed, prop the rear of the fuel tank up with a block, to gain access to the top of the engine area and six-pin fuel injector connector.
4. Position the Fi2000 to the rear of the tool kit on the flat frame member (under the seat) and feed the six pin connector harness around the right side frame rail, and up underneath the fuel tank, locate the stock six pin connector on top of the fuel injector area, disconnect it by prying up the tab on the female connector. Once disconnected, mate the corresponding male and female Fi2000 connectors with the stock connectors, be sure they seat firmly when pressed together, see Figure 1.
5. Route the two oxygen sensor harnesses along the upper right frame rail, and then underneath it directly behind the oil fill neck and ground connection, see Figure 2. Route both connectors behind the insulated relay cover; you may need to pull it outward slightly, to fit the harnesses behind it.
6. Locate the rear oxygen sensor connector mounted on the side of the relay cover. On the female connector pull the retaining tang outward to release the male connector. Insert the corresponding male and female Fi2000 connectors into the stock connectors from the shorter of the two oxygen sensor harnesses, be sure the connectors seat properly when pressed together. Tuck the excess harness beneath the relay cover; see Figure 2.
7. Route the longer Fi2000 oxygen sensor harness, along the right rear frame rail, just in front of the swing arm, continue routing it along the lower frame rail forward toward the front stock oxygen sensor connector. Disconnect the stock oxygen sensor connector, and mate the corresponding Fi2000 male and female connectors to it, be sure they seat properly when pressed together, see Figure 3.
8. On the front oxygen sensor harness, pull any extra slack out of it back towards the insulated relay cover. Install two 6" zip ties along the frame rail as indicated in Figure 4, to prevent the harness from getting too close to the exhaust.
9. On the fuel injector harness, pull any slack out of it back toward the Fi2000 housing, and install one 12" zip tie around the harness and frame neck, trim off excess zip tie, see Figure 5.
10. Locate the air injection pump and inlet hose at the front of the engine on the right side. To prevent severe trailing throttle backfiring, install the supplied 0.75" plug into the air inlet hose, see Figure 6, push plug in until flush.
