manuscripts which adopt an integrative approach to aquatic sciences explaining ecological and hydrological processes at a river basin scale or propose practical applications of this knowledge It will also consider papers in other hydrobiological fields Especially welcome are papers on regulatory mechanism within biocenosis and the resistance and resilience of freshwater and costal zones ecosystems There is no page charge for published papers All submitted papers written exclusively in English should be original works unpublished and not under consideration for publication elsewhere All papers are peer reviewed The following types of papers are considered for publication in E H original research papers invited or submitted review papers short communications

Urban and Highway Stormwater Pollution Thorkild Hvitved-Jacobsen, Jes Vollertsen, Asbjorn Haaning Nielsen, 2010-03-25 As the world population grows already burgeoning cities are becoming taxed in every conceivable way One topic that receives few headlines but significantly impacts an area s quality of health and economic development is the challenge to maintain sustainable urban drainage SUD Poor drainage can hamper transportation add to problems of polluti

Urban Ecology Kevin J. Gaston, 2010 This is the urban century in which for the first time the majority of people live in towns and cities Understanding how people influence and are influenced by the green component of these environments is therefore of enormous significance Providing an overview of the essentials of urban ecology the book begins by covering the vital background concepts of the urbanisation process and the effect that it can have on ecosystem functions and services Later sections are devoted to examining how species respond to urbanisation the many facets of human ecology interactions and the issues surrounding urban planning and the provision of urban green spaces Drawing on examples from urban settlements around the world it highlights the progress to date in this burgeoning field as well as the challenges that lie ahead Provided by publisher

Flash Floods Kevin Sene, 2012-12-14 Flash floods typically develop in a period a few hours or less and can arise from heavy rainfall and other causes such as dam or flood defence breaches and ice jam breaks The rapid development often associated with a high debris content can present a considerable risk to people and property This book describes recent developments in techniques for monitoring and forecasting the development of flash floods and providing flood warnings Topics which are discussed include rainfall and river monitoring nowcasting Numerical Weather Prediction rainfall runoff modelling and approaches to the dissemination of flood warnings and provision of an emergency response The book is potentially useful on civil engineering water resources meteorology and hydrology courses and for post graduate studies but is primarily intended as a review of the topic for a wider audience

Water Pollution XI C. A. Brebbia, 2012 Water pollution is by necessity an interdisciplinary field involving scientists and professionals with a wide range of expertise It also transcends national borders since the contamination of water resources is a problem of global concern The International Conference on Modelling Monitoring and Prevention of Water Pollution held biennially in different locations around the world has been providing a forum for the presentation and discussion of the latest developments in the field since 1991 The papers in this volume present some of the latest results in this important field work

which is essential to understanding the nature of the problem and for proposing appropriate solutions which may eventually provide the guidelines required to take steps towards the remediation or recovery of water resources Water Pollution XI contains papers presented at the latest Eleventh Conference and includes the following topics Water quality Groundwater and aquifer issues Environmental monitoring and control Remediation Pollution prevention Lakes and rivers Agricultural contamination Wastewater treatment and management Offshore pollution and oil spills Emerging technologies Biosensors Health risk studies Nano particles Socio economic costs Biosystems Education and training Integrated Urban Water Management: Humid Tropics Jonathan N. Parkinson,Joel Avruch Goldenfum,Carlos Tucci,2010-03-26 Excess water in the urban environment results in flooding which causes structural damage risks to personal safety and disruption to city life Water is also a major contributory factor for disease transmission as well as being the medium for transport of many pollutants These problems are of increasing concern due to climate changes and are parti *Water and Urban Development Paradigms* Jan Feyen,Kelly Shannon,Matthew Neville,2008-09-03 Communication across and integration of disciplines in the urban water sector seems today more imperative than ever before Water is a strategic and shrinking resource It is probably the world s most valuable resource and clean water has even been touted as the next oil Control of water from access to management has always been a Sustaining Cape Town Amy Davison,2010-10-01 Although cities constitute the key contributors to unsustainable development especially due to their ecological and equity impacts they are also viewed as the vehicle for the transition to a sustainable future for humanity both in terms of technologies as well as policies and lifestyle changes This book introduces the theoretical principles which underpin the required transition to sustainable cities in general and Cape Town in particular The subsequent fourteen chapters tackle more specific areas of interventions and the key constraints towards realisation of related transition interventions in the city of Cape Town **Integrated Pollution Prevention and Control for the Municipal Water Cycle in a River Basin Context** Alberto Galvis-Castaño,2019-08-14 The protection of water resources from deterioration in quality by pollution discharges is probably the biggest challenge in sustainable water resources management in the recent decades In practice most countries have adopted pollution control strategies and measures which are based on end of pipe solutions wastewater treatment plants and adjustments to the regulations including taxes for wastewater discharges Conventional Strategy Although this approach involves very high costs on many occasions this strategy has been a complete failure The research described in this book contribute to the development of sustainable solutions for the previously outlined problem It was based on the validation of the Three Step Strategic Approach concept 3 SSA which includes 1 prevention or minimisation of waste production 2 treatment aimed at recovery and reuse of waste components and 3 disposal of remaining waste with stimulation of natural self purification of the receiving water body The study showed overall positive effects of the 3 SSA in comparison of Conventional Strategy on wastewater management in the Upper Basin 389 km of the Cauca river the second most important river in Colombia The

Cost Benefit Analysis clearly favoured the 3 SSA generating a major impact on the river water quality at lower cost compared to the Conventional Strategy

Urban Hydroinformatics Roland K. Price, Zoran Vojinovi?, 2011 This book is an introduction to hydroinformatics applied to urban water management It shows how to make the best use of information and communication technologies for manipulating information to manage water in the urban environment The book covers the acquisition and analysis of data from urban water systems to instantiate mathematical models or calculations which describe identified physical processes The models are operated within prescribed management procedures to inform decision makers who are responsible to recognized stakeholders The application is to the major components of the urban water environment namely water supply treatment and distribution wastewater and stormwater collection treatment and impact on receiving waters and groundwater and urban flooding Urban Hydroinformatics pays particular attention to modeling decision support through procedures economics and management and implementation in both developed and developing countries The book is written with post graduates researchers and practicing engineers who are involved in urban water management and want to improve the scope and reliability of their systems

Water Resources Engineering Larry W. Mays, 2019-04-02 Modern water conveyance and storage techniques are the product of thousands of years of human innovation today we rely on that same innovation to devise solutions to problems surrounding the rational use and conservation of water resources with the same overarching goal to supply humankind with adequate clean freshwater Water Resources Engineering presents an in depth introduction to hydrological and hydraulic processes with rigorous coverage of both core principles and practical applications The discussion focuses on the engineering aspects of water supply and water excess management relating water use and the hydrological cycle to fundamental concepts of fluid mechanics energy and other physical concepts while emphasizing the use of up to date analytical tools and methods Now in its Third Edition this straightforward text includes new links to additional resources that help students develop a deeper more intuitive grasp of the material while the depth and breadth of coverage retains a level of rigor suitable for use as a reference among practicing engineers
