Database Systems: An Application-Oriented Approach, Introductory Version, 2/E Kifer, 2007-09 Database Systems Michael Kifer, Arthur J. Bernstein, Philip M. Lewis, 2006 This textbook explains the conceptual and engineering principles of database design Rather than focusing on how to implement a database management system it focuses on building applications and the theory underlying relational databases and relational query languages An ongoing case study illustrates both database and software engineering concepts Originally published as Databases and transaction processing by Pearson Education in 2002 the second edition adds a chapter on database tuning and a section on UML Annotation 2004 Book News Inc Portland OR booknews com *Databases and Transaction Processing* Philip M. Lewis, Arthur J. Bernstein, Michael Kifer, 2002 Providing a motivational overview of database management theory this book focuses on the applications of databases that most readers will use in the real world The traditional database theory is introduced with a focus on using this theory to build database and transaction processing applications Moving Objects Databases Ralf Hartmut Güting, Markus Schneider, 2005-09-06 Moving Objects Databases is the first uniform treatment of moving objects databases the technology that supports GPS and RFID It focuses on the modeling and design of data from moving objects such as people animals vehicles hurricanes forest fires oil spills armies or other objects as well as the storage retrieval and querying of that very voluminous data It includes homework assignments at the end of each chapter exercises throughout the text that students can complete as they read and a solutions manual in the back of the book This book is intended for graduate or advanced undergraduate students It is also recommended for computer scientists and database systems engineers and programmers in government industry and academia professionals from other disciplines e g geography geology soil science hydrology urban and regional planning mobile computing bioterrorism and homeland security etc Focuses on the modeling and design of data from moving objects such as people animals vehicles hurricanes forest fires oil spills armies or other objects as well as the storage retrieval and querying of that very voluminous data Demonstrates through many practical examples and illustrations how new concepts and techniques are used to integrate time and space in database applications Provides exercises and solutions in each chapter to enable the reader to explore recent research results in practice Advances in Databases and Information Systems Johann Eder, Hele-Mai Haav, Ahto Kalja, Jaan Penjam, 2005-09-21 The 9th East European Conference on Advances in Databases and Information Systems was held on September 12 15 2005 in Tallinn Estonia It was organized in a cooperation between the Institute of Cybernetics at Tallinn University of Technology the Department of Computer Engineering of Tallinn University of Technology and the Moscow chapter of ACM SIGMOD The main objective of the ADBIS series of conferences is to provide a forum for the dissemination of excellent research accomplishments and to promote interaction and collaboration between the Database and Information Systems research communities from Central and East European countries and the rest of the world The ADBIS conferences

provide an international platform for the presentation of research on database theory, the development of advanced DBMS technologies and their advanced applications in particular in information systems. The 2005 conference continued the ADBIS conferences held in St. Petersburg 1997, Poznań 1998, Maribor 1999, Prague 2000, Vilnius 2001, Bratislava 2002, Dresden 2003, and Budapest 2004. The conference consisted of regular sessions with technical contributions reviewed and selected by an international Program Committee as well as of invited talks and tutorials given by leading scientists. For the first time the ADBIS conferences had a satellite event, a workshop on data mining and knowledge discovery. The ADMKD 2005 workshop with its own international Program Committee as well as proceedings served as a forum to encourage researchers and practitioners to discuss and investigate data mining research and implementation issues and to share experience in developing and deploying data mining systems.

Database Systems Elvis Foster, Shripad Godbole, 2022-09-26. This book provides a concise but comprehensive guide to the disciplines of database design, construction, implementation, and management. Based on the authors' professional experience in the software engineering and IT industries before making a career switch to academia, the text stresses sound database design as a necessary precursor to successful development and administration of database systems. The discipline of database systems design and management is discussed within the context of the bigger picture of software engineering. Students are led to understand from the outset of the text that a database is a critical component of a software infrastructure and that proper database design and management is integral to the success of a software system. Additionally, students are led to appreciate the huge value of a properly designed database to the success of a business enterprise. The text was written for three target audiences: It is suited for undergraduate students of computer science and related disciplines who are pursuing a course in database systems; graduate students who are pursuing an introductory course to database and practicing software engineers and information technology IT professionals who need a quick reference on database design. *Database Systems: A Pragmatic Approach* 3rd Edition discusses concepts, principles, design, implementation, and management issues related to database systems. these two communities Methodologists tend to approach the design problem with task domain organisational analysis while the tool builders suggest design empowerment envisioning as a means of improving the way users work rather than relying on analysis of current systems This debate revolves around the questions of whether users current work is optimal or whether designers have the insight to empower users by creating effective solutions to their problems Tool builders typically want to build something then get the users to try it while the methodologists want to specify something validate it and then build it
