Data Mining with Decision Trees Haim Dahan,Shahar Cohen,Lior Rokach,Oded Maimon,2014-02-14 This book explores a proactive and domain driven method to classification tasks This novel proactive approach to data mining not only induces a model for predicting or explaining a phenomenon but also utilizes specific problem domain knowledge to suggest specific actions to achieve optimal changes in the value of the target attribute In particular the authors suggest a specific implementation of the domain driven proactive approach for classification trees The book centers on the core idea of moving observations from one branch of the tree to another It introduces a novel splitting criterion for decision trees termed maximal utility which maximizes the potential for enhancing profitability in the output tree Two real world case studies one of a leading wireless operator and the other of a major security company are also included and demonstrate how applying the proactive approach to classification tasks can solve business problems Proactive Data Mining with Decision Trees is intended for researchers practitioners and advanced level students **Data Mining with Decision Trees and Decision Rules**

International Business Machines Corporation. Research Division,Chidanand V. Apté,Sholom M. Weiss,1997 Abstract This paper describes the use of decision tree and rule induction in data mining applications Of methods for classification and regression that have been developed in the fields of pattern recognition statistics and machine learning these are of particular interest for data mining since they utilize symbolic and interpretable representations Symbolic solutions can provide a high degree of insight into the decision boundaries that exist in the data and the logic underlying them This aspect makes these predictive mining techniques particularly attractive in commercial and industrial data mining applications We present here a synopsis of some major state of the art tree and rule mining methodologies as well as some recent advances

Decision Trees for Analytics Using SAS Enterprise Miner Barry De Ville,Padraic Neville,2019-07-03 Decision Trees for Analytics Using SAS Enterprise Miner is the most comprehensive treatment of decision tree theory use and applications available in one easy to access place This book illustrates the application and operation of decision trees in business intelligence data mining business analytics prediction and knowledge discovery It explains in detail the use of decision trees as a data mining technique and how this technique complements and supplements data mining approaches such as regression as well as other business intelligence applications that incorporate tabular reports OLAP or multidimensional cubes An expanded and enhanced release of Decision Trees for Business Intelligence and Data Mining Using SAS Enterprise Miner this book adds up to date treatments of boosting and high performance forest approaches and rule induction There is a dedicated section on the most recent findings related to bias reduction in variable selection It provides an exhaustive treatment of the end to end process of decision tree construction and the respective considerations and algorithms and it includes discussions of key issues in decision tree practice Analysts who have an introductory understanding of data mining and who are looking for a more advanced in depth look at the theory and methods of a decision tree approach to business intelligence and data mining will benefit from this book

Decision Trees, Regression and Neural Network Models With Data Mining Tools Scientific Books,2016-01-01 The book begins by introducing tools required for building predictive models The aim is to build the three main predictive modeling tools Decision Tree Neural Network and Regression These are addressed in considerable detail with numerous examples of practical business applications that are illustrated with tables charts displays equations and even manual calculations that let you see the essence of what Enterprise Miner is doing as it estimates or optimizes a given model

Evolutionary Decision Trees in Large-Scale Data Mining Marek Kretowski,2019-06-05 This book presents a unified framework based on specialized evolutionary algorithms for the global induction of various types of classification and regression trees from data The resulting univariate or oblique trees are significantly smaller than those produced by standard top down methods an aspect that is critical for the interpretation of mined patterns by domain analysts The approach presented here is extremely flexible and can easily be adapted to specific data mining applications e g cost sensitive model trees for financial data or multi test trees for gene expression data The global induction can be efficiently applied to large scale data without the need for extraordinary resources With a simple GPU based acceleration datasets composed of millions of instances can be mined in minutes In the event that the size of the datasets makes the fastest memory computing impossible the Spark based implementation on computer clusters which offers impressive fault tolerance and scalability potential can be applied

Meta-Learning in Decision Tree Induction Krzysztof Grąbczewski,2013-09-11 The book focuses on different variants of decision tree induction but also describes the meta learning approach in general which is applicable to other types of machine learning algorithms The book discusses different variants of decision tree induction and represents a useful source of information to readers wishing to review some of the

techniques used in decision tree learning as well as different ensemble methods that involve decision trees It is shown that the knowledge of different components used within decision tree learning needs to be systematized to enable the system to generate and evaluate different variants of machine learning algorithms with the aim of identifying the top most performers or potentially the best one A unified view of decision tree learning enables to emulate different decision tree algorithms simply by setting certain parameters As meta learning requires running many different processes with the aim of obtaining performance results a detailed description of the experimental methodology and evaluation framework is provided Meta learning is discussed in great detail in the second half of the book The exposition starts by presenting a comprehensive review of many meta learning approaches explored in the past described in literature including for instance approaches that provide a ranking of algorithms The approach described can be related to other work that exploits planning whose aim is to construct data mining workflows The book stimulates interchange of ideas between different albeit related approaches

Data Mining Multi-Attribute Decision System. Facilitating Decision Support Through Data Mining Technique by Hierarchical Multi-Attribute Decision Models Pankaj Pathak,Parashu Ram Pal,2020-11-09 Doctoral Thesis Dissertation from the year 2020 in the subject Computer Science Commercial Information Technology Symbiosis International University language English abstract Data mining is coined one of the steps while discovering insights from large amounts of data which may be stored in databases data warehouses or in other information repositories Data mining is now playing a significant role in seeking a decision support to draw higher profits by the modern business world Various researchers studied the benefits of data mining processes and its adoption by business organizations but very few of them have discussed the success factors of decision support projects The Research Hypothesis states the involvement of the decision tree while adopting accuracy of classification and while emphasizing the impact factor or importance of the attributes rather than the information gain The concept of involvement of impact factor rather than just accuracy can be utilized in developing the new algorithm whose performance improves over the existing algorithms We proposed a new algorithm which improves accuracy and contributing

effectively in decision tree learning We presented an algorithm that resolves the above stated problem of confliction of class We have introduced the impact factor and classified impact factor to resolve the conflict situation We have used data mining technique in facilitating the decision support with improved performance over its existing companion We have also addressed the unique problem which have not been addressed before Definitely the fusion of data mining and decision support can contribute to problem solving by enabling the vast hidden knowledge from data and knowledge received from experts We have discussed a lot of work done in the field of decision support and hierarchical multi attribute decision models Ample amount of algorithms are available which are used to classify the data in datasets Most algorithms use the concept of information gain for classification purpose Some Lacking areas also exist There is a need for an ideal algorithm for large datasets There is a need for handling the missing values There is a need for removing attribute bias towards choosing a random class when a conflict occurs There is a need for decision support model which takes the advantages of hierarchical multi attribute classification algorithms
