Interfaces to Database Systems (IDS92) Richard Cooper,2012-12-06 Despite the volume of research carried out into the design of database systems and the design of user interfaces there is little cross fertilization between the two areas The control of user interfaces to database systems is therefore significantly less advanced than other aspects of DBMS design As database functionality is used in a wider range of areas such as design applications the suitability of the user interface is becoming increasingly important It is therefore necessary to begin applying the knowledge developed by HCI researchers to the specialised domain of database systems This volume contains revised papers from the International Workshop on Interfaces to Database Systems held in Glasgow 1 3 July 1992 The workshop aimed to develop an interaction between the design of database systems and user interfaces It discussed both the production of interfaces tailored to particular applications and also more general systems within which interfaces can be developed Some of the papers concentrate on usability aspects some discuss different interface metaphors whilst others tackle the question of designing a general conceptual model The latter topic is of particular importance as it is only by achieving an abstract model of what the user understands to be in the database that the data can be associated with appropriate interface facilities Among the contents of the volume are integrated interfaces to publicly available databases database query interface for medical information systems an integrated approach to task oriented database retrieval interfaces GRADI a graphical database interface for a multimedia DBMS cognitive view mechanism for multimedia information systems a graphical schema representation for object oriented databases a conceptual framework for error analysis in SQL interfaces a browser for a version entity relationship database Interfaces to Database Systems IDS92 is unique in that it brings together a variety of approaches from the database and HCI research communities It will provide essential reading for researchers of database systems and also industrial developers of DBMS

Database and Expert Systems Applications Fernando Galindo,Makoto Takizawa,Roland Traunmüller,2004-10-29 DEXA 2004 the 15th International Conference on Database and Expert Systems Applications was held August 30 September 3 2004 at the University of Zaragoza Spain The quickly growing spectrum of database applications has led to the establishment of more specialized discussion platforms DaWaK Conference EC Web Conference EGOVConference Trustbus Conference and DEXA Workshop Every DEXA event has its own conference proceedings which were held in parallel with the DEXA Conference also in Zaragoza In your hands are the results of much effort The work begins with the preparation of the submitted papers which then go through the reviewing process The accepted papers are revised to final versions by their authors and are then arranged within the conference program All culminates in the conference itself For this conference 304 papers were submitted and I want to thank to all who contributed to it they are the real base of the conference The program committee and the supporting reviewers produced altogether 942 referee reports in average 3 1 reports per paper and selected 92 papers for presentation At this point we would like to say many thanks to all the institutions that actively supported this conference and made it possible These were University of Zaragoza FAW DEXA Association Austrian Computer Society

Computer and Information Sciences - ISCIS 2004 Cevdet Aykanat,Tugrul Dayar,Ibrahim Korpeoglu,2004-10-29 The series of ISCIS International Symposium on Computer and Information Sciences symposia have been held each year since 1986 mostly in Turkey and occasionally abroad It is the main computer science and engineering meeting organized by Turkish academics and was founded by Erol Gelenbe Each year ISCIS attracts a significant number of international participants from all over the world The 19th ISCIS was organized by Bilkent University Department of Computer Engineering and was held in Kemer Antalya Turkey during 27 29 October 2004 For ISCIS 2004 a total of 335 papers went through the review process and a large number of high quality papers competed for acceptance This volume of the Springer Lecture Notes in Computer Science LNCS series contains 100 of those papers that broadly fall into the following areas of interest artificial intelligence and machine learning computer graphics and user interfaces computer networks and security computer vision and image processing databases systems modeling and performance evaluation natural language processing parallel and distributed computing real time control applications software engineering and programming systems and theory of computing

Database and Expert Systems Applications Vladimir Marik,Jiri Lazansky,1993-08-25 This volume constitutes the proceedings of the 4th International Conference on Database and Expert Systems Applications DEXA held in Prague Czech Republic in September 1993 Traditionally the objective of the DEXA conferences is to serve as an international forum

for the discussion and exchange of research results and practical experience among theoreticians and professionals working in the field of database and artificial intelligence technologies. Despite the fact that in the conference title the applications aspect is mentioned explicitly, the theoretical and the practical points of view in the field are well balanced in the program of DEXA 93. The growing importance of the conference series is outlined by the remarkably high number of 269 submissions and by the support given by renowned organizations. DEXA 93 is held for the first time outside the former GDR in an East European country and is essentially contributing to the advancement of the East-West scientific cooperation in the field of database and AI systems. This proceedings contains the 78 contributed papers carefully selected by an international program committee with the support of a high number of subreferees. The volume is organized in sections on data models, distributed databases, advanced database aspects, database optimization and performance evaluation, spatial and geographic databases, expert systems and knowledge engineering, legal systems, other database and artificial intelligence applications, software engineering and hypertext, hypermedia and user interfaces.

Forthcoming Books Rose Arny, 2004 [Building a Columnar Database on RAMCloud](#) Christian Tinnefeld, 2015-07-07 This book examines the field of parallel database management systems and illustrates the great variety of solutions based on a shared storage or a shared nothing architecture. Constantly dropping memory prices and the desire to operate with low latency responses on large sets of data paved the way for main memory based parallel database management systems. However, this area is currently dominated by the shared nothing approach in order to preserve the in-memory performance advantage by processing data locally on each server. The main argument this book makes is that such an unilateral development will cease due to the combination of the following three trends: a) Today's network technology features remote direct memory access (RDMA) and narrows the performance gap between accessing main memory on a server and of a remote server to and even below a single order of magnitude; b) Modern storage systems scale gracefully, are elastic and provide high availability; c) A modern storage system such as Stanford's RAM Cloud even keeps all data resident in the main memory. Exploiting these characteristics in the context of a main memory based parallel database management system is desirable. The book demonstrates that the advent of RDMA enabled network technology makes the creation of a parallel main memory DBMS based on a shared storage approach feasible.
