Learn How to Draw Human Figures - For the Absolute Beginner John Davidson, 2013-05-15 Learn How to Draw Human Figures For the Absolute Beginner Table of Contents Introduction Drawing Tools Body Proportions Body Shape Polygonal Form Ball Joints Arms Legs Muscle Structure Heads Clothing Proportioning the body structure properly is important when drawing a person A disproportionate body will mislead the portrayed perspective of your subject Or worse the subject might look distorted and deformed Knowing the proper length for your subject the person or character you are drawing can be easily achieved by drawing the head first In this way the traditional method in laying out the proper proportion of the body can be initiated The traditional method of approximating the body proportion of a subject is by using its head s size The height of an average man is approximately eight to ten head s size tall while a women s height is about seven to nine head s size If your subject character is eight heads tall then the proportions should be as follows The distance of the head face to crotch is about four heads long The arms including the hands from the shoulders are closely four heads

long An average opened hand is usually equal to or almost one head size While the length of a small hand can be compared to the length of the eyebrows to chin The wrists are aligned or right above the level of crotch The lower extremities legs are about four heads long Adjustments are most effective by decreasing or increasing the length of each part by half head size depending on your preferred height The wideness of the chest is usually two horizontal head s size or more two and half depending on the body built you prefer for your subject A subject having less than two head s size will make its actual head look too big or a body proportion too skinny Take note that these proportions are just an approximation of an average person s body structure The measurements can change depending on the body type you prefer to portray such as a long legged subject would obviously have legs longer than four heads or perhaps a shorter upper body to give his or her lower extremities more length Adjustments are done according to the certain body characteristic of your subject based on his her function or purpose The body proportion should also match the age of your subject A person that is eight heads tall effectively portrays an average adult but it is most unlikely the case when portraying a pre teen Considering that the subject will have a smaller head which will be used to approximate his her height the number of heads used to convey how tall he she is must be decreased as well Considering that an average man is eight heads tall A young adult can be seven to seven and half heads tall A teenager can be six to seven heads tall A young child can be five to six and half head tall A toddler can be four to five heads tall Notice how the head measurements adjust according to their age An individual s growth gradually decreases as he she reaches adulthood But certain measurements and alignments are still implied no matter how old the subject is such as the comparative length per head s size of arms and legs and the same level of wrists to the crotch

Davidson,2017-05-30 Table of Contents Introduction Drawing a Dinosaur Drawing tools Drawing Software Dinosaur Heads T rex Dilophosaurus Pachycephalosaurus Theropods Spinosaurus Ornithopods Parasaurolophus Armored Dinosaurs Stegosaurus Ankylosaurias Ankylosaurus Ceratopsian Triceratops Publisher Introduction Drawing a Dinosaur In order to have a good start in learning how to draw a dinosaur or anything for this matter you should know the basics of visually describing a form You should know how to follow through the contour planes or dimensions of any basic shapes to effectively portray the subject Observe how the reference lines travel across the body of the figure and how the depiction of its skin texture or any other details follows the dimensions How you apply the shades also matters when you want to portray texture and dimensions It is also better to know how to create the most basic form of the subject to properly depict a proportionate figure and identify if there is anything wrong or missing in your outline before you finalize a drawing This tutorial will include a careful process of establishing the main outline of the figure erasing unnecessary line works and redefining layering the colors and shades according to its value and correcting errors along the way The proportions may differ from subject to subject even if it s from the same genus no matter how little subtle differences will matter in the long run so I advice you to have image preferences and observe them before you do your own Depictions of dinosaurs may vary from artists to artists since their existence is solely based on fossils and so it s up to your creativity to fill up whatever subtle parts and elements might be missing to depict the image of an animal that is barely known *Architectural Perspective for Beginners* Frank Ayers Wright,1896
