**Biodiversity** Usha Tandon, Mohan

Parasaran, Sidharth Luthra, 2017-11-02 Conservation of biodiversity is a fundamental concern towards securing a sustainable future. This volume argues that despite various domestic and international policies and legal frameworks on biodiversity conservation, be it forest, wildlife, marine, coastal, etc., their implementation suffers from many deficiencies. It explores the factors that hinder effective implementation of these policies and frameworks. It also analyses existing laws, both international and domestic, to identify inherent problems in the existing legal system. The book maintains that careful adherence to established procedures and protocols, public awareness, filling the lacuna in legal framework, and a strong political will are sine qua non for effective conservation of biodiversity and sustainable development. The volume defends the protection of traditional knowledge and participation of indigenous communities along with reinforcements of intellectual property in this regard. It also commends the role played by the Indian judiciary, especially the Supreme Court of India and India's National Green Tribunal, for the preservation and enhancement of natural resources by applying established as well as evolving principles of environmental law. This book will be useful to scholars and researchers of environmental studies, development studies, policy studies, and law related to biodiversity and conservation.

Molecular models are as vital a tool for the study of chemistry as calculators are for the study of mathematics. Molecular Visions models may be assembled in infinite combinations, enabling the user to construct not only familiar configurations but also undiscovered possibilities. Models are intended to inspire the imagination, stimulate thought, and assist the visualization process. They present the user with a solid form of an abstract object that can otherwise only be visualized by the chemist. While chemistry textbooks use letters and graphics to describe molecules, molecular models make them real.

For courses in Chemistry. In 1965, George Brumlik developed the first molecular model set. Framework Molecular Models for the sophomore student of Organic Chemistry. It proved to be the model set of choice for thousands of professors over a span of twenty-five years and still remains popular. Now, with the introduction of the Universal Molecular Models, Dr. Brumlik has developed a sophomore-level set that once again is a first. No other model on the market today demonstrates the framework of a molecule, the space-filling capacity of a molecule, and molecular orbitals. In addition, the set is more scientifically accurate than anything currently available in a student price range. This scientifically accurate molecular model set demonstrates the framework of a molecule, the space-filling capacity of a molecule, and molecular

orbitals Efficiently designed and constructed the UMM set is fully interchangeable with the FMM set and features color coded atomic valence spheres and connectors allowing students to represent all molecules having up to 12 atoms in their valence shells      Organic Molecular Model Kit Steve Darling,2006-08-01 Darling Models tm contain various pieces used to build atoms bonds and molecules These models bring visual representation and hands on learning to the microscopic world of molecules      **Universal Molecular Model Set** George C.
