Flight To The Future Human Factors In Air Traffic Control:

Flight to the Future National Research Council, Division of Behavioral and Social Sciences and Education, Board on Human-Systems Integration, Panel on Human Factors in Air Traffic Control Automation, 1997-01-28 Despite the strong safety record of the national airspace system serious disruptions occasionally occur often as a result of outdated or failed equipment Under these circumstances safety relies on the skills of the controllers and pilots and on reducing the number of aircraft in the air The current and growing pressures to increase the capacity to handle a greater number of flights has led to a call for faster and more powerful equipment and for equipment that can take over some of the tasks now being performed by humans Increasing the role of automation in air traffic control may provide a more efficient system but will human controllers be able to effectively take over when problems occur This comprehensive volume provides a baseline of knowledge about the capabilities and limitations of humans relative to the variety of functions performed in air traffic control It focuses on balancing safety with the expeditious flow of air traffic identifying lessons from past air accidents The book discusses The function of the national airspace system and the procedures for hiring training and evaluating controllers Decisionmaking memory alertness vigilance sleep patterns during shift work communication and other factors in controllers performance Research on automation and human factors in air traffic control and incorporation of findings into the system The Federal Aviation Administration s management of the air traffic control system and its dual mandate to promote safety and the development of air commerce This book also offers recommendations for evaluation the human role in automated air traffic control systems and for managing the introduction of automation into current facilities and operations It will be of interest to anyone concerned about air safety policymakers regulators air traffic managers and controllers airline officials and passenger advocates

The Future of Air Traffic Control Panel on Human Factors in Air Traffic Control Automation, Board on Human-Systems Integration, Division of Behavioral and Social Sciences and Education, National Research Council, 1998-02-09 Automation in air traffic control may increase efficiency but it also raises questions about adequate human control over automated systems Following on the panel s first volume on air traffic control automation *Flight to the Future* NRC 1997 this book focuses on the interaction of pilots and air traffic controllers with a growing network of automated functions in the airspace system The panel offers recommendations for development of human centered automation addressing key areas such as providing levels of automation that are appropriate to levels of risk examining procedures for recovery from emergencies free flight versus ground based authority and more The book explores ways in which technology can build on human strengths and compensate for human vulnerabilities minimizing both mistrust of automation and complacency about its abilities The panel presents an overview of emerging technologies and trends toward automation within the national airspace system in areas such as global positioning and other aspects of surveillance flight information provided to pilots and controllers collision avoidance strategic long term planning and systems for training and

maintenance The book examines how to achieve better integration of research and development including the importance of user involvement in air traffic control It also discusses how to harmonize the wide range of functions in the national airspace system with a detailed review of the free flight initiative

Subcommittee on Aviation, 1998 *Federal Aviation Administration National Aviation Research Plan*, 1999 *Human Factors in Air Traffic Control* Mark W. Smolensky, Earl S. Stein, 1998-03-18 The study of human factors has progressed greatly in the past 10 years particularly with regard to the literature available in applied areas The authors of this text focus on the most important aspects of this literature the increasing concern over the deregulation of airlines and the increase in aviation accidents The book covers general system safety human perception information processing and cognitive load capacity during air traffic control performance as well as team coordination selection and training of personnel work station and software design and communication issues

Developing the Future Aviation System Rod Baldwin, 2017-03-02 The major changes taking place in technology have some of the greatest effect in the world of aviation Yet in an industry which started with the concept of open skies each sector has traditionally developed on its own and adjusted to developments in other areas as and when required The need for integration is particularly important as the skies become increasingly crowded More intense commercialization dramatically increases the interlocking between

technological developments and the size of the financial investments required For maximum efficiency the aviation system thus has to develop as an integrated whole with a greater awareness of events in other sectors This book is intended to meet this requirement by addressing the breadth and depth of the aviation system and looking at some areas where significant advances are happening While following the processes of development the reader will see where the results might lead in the new century Its three parts concentrate on areas of great significance in integration as well as in technological progress especially for their impact on human and social aspects The editor and the invited contributors are amongst the foremost experts researchers and industry leaders in their fields in the global aviation community many with hands on experience of massive change The intended readership includes those who are moving into management functions in air traffic management airplane manufacturing and airline operations in training centres colleges and institutions *The Future of Air Traffic Control Modernization* United States. International Encyclopedia of Ergonomics and Human Factors made history as the first unified source of reliable information drawn from many realms of science and technology and created specifically with ergonomics professionals in mind. It was also a winner of the Best Reference Award 2002 from the Engineering Libraries Division American Society of Engineering Education USA and the Outstanding Academic Title 2002 from Choice Magazine. Not content to rest on his laurels, human factors and ergonomics expert Professor Waldemar Karwowski has overhauled his standard setting resource incorporating coverage of tried and true methods, fundamental principles and major paradigm shifts in philosophy, thought and design. Demonstrating the truly interdisciplinary nature of this field, these changes make the second edition even more comprehensive, more informative, more in a word encyclopedic. Keeping the format popularized by the first edition, the new edition has been completely revised and updated. Divided into 13 sections and organized alphabetically, within each section the entries provide a clear and simple outline of the topics as well as precise and practical information. The book reviews applications, tools and innovative concepts related to ergonomic research. Technical terms are defined where possible within entries as well as in a glossary. Students and professionals will find this format invaluable whether they have ergonomics, engineering, computing or psychology backgrounds. Experts and researchers will also find it an excellent source of information on areas beyond the range of their direct interests.

The Future Air Navigation System (FANS) Vincent P.

Galotti, 2019-05-23. In view of the increase in air traffic, there has been a great deal of work by the nations of the world under the auspices of ICAO toward developing the concept for a future air navigation infrastructure to serve worldwide civil aviation efficiently. Even though the concept is well described and implementation is beginning, only technical manuals are available to advance the systems concept. This book describes the global vision for the Future Air Navigation System (FANS) and is the first text of its kind dedicated solely to Communications, Navigation, Surveillance, Air Traffic Management and the CNS/ATM systems concept. In addition to the technical issues associated with CNS/ATM, the book also examines institutional, economic, labour and Human Factors issues. It is designed as a text usable in the classroom environment in universities and aviation technical schools.

Pilot Selection

Robert Bor, Carina Eriksen, Todd Hubbard, Ray King, 2019-10-16. This comprehensive book describes in practical terms, underpinned by research, how recruitment selection and psychological assessment can be conducted amongst pilots. The chapters emphasize evidence-based and ethical selection methods for different pilot groups. It includes chapters written by experts in the field and also covers related areas such as air traffic controllers and astronauts. The book is written for airline managers, senior pilots responsible for recruitment and training, human resources specialists, human factors and safety specialists, occupational health doctors, psychologists, AMEs, practitioners or academics involved in pilot selection.
