communicates accurately at all levels of the construction process **SU+RE** John Nastasi, Ed May, Clarke Snell, 2018-04-02

In the 21st century architects and engineers are being challenged to produce work that is concurrently sustainable and resilient. Buildings need to mitigate their impact on climate change by minimising their carbon footprint while also countering the challenging new weather conditions. Globally severe storms, extreme droughts and rising sea levels are becoming an increasingly reoccurring feature. To respond, a design process is required that seeks to integrate resiliency by building in the capacity to absorb the impacts of these disruptive events and adapt over time to further changes while simultaneously being part of the solution to the problem itself. This issue of AD is guest edited by the interdisciplinary team at Stevens Institute of Technology who developed the winning entry for the 2015 US Department of Energy Solar Decathlon competition, the SU RE House. While particular focus is paid to this student designed and built prototype home, the publication also provides a broader discussion of the value of design-build as a model for tackling the issue of integrating sustainability and resilience and what changes are required across education, policy, practice and industry for widespread implementation. Contributors include Bronwyn Barry, Michael Bruno, Alex Carpenter, Adam Cohen, Ann Holtzman, Ken Levenson, Brady Peters, Terri Peters, Karin Stieldorf, Alex Washburn, Claire Weisz and Graham Wright. Featured architects: 3XN, GXN, FXFOWLE Architects, Local Office, Landscape Architecture, LOLA, Lateral Office, Skidmore, Owings, Merrill, SOM, Snohetta, Structures, Design, Build and WXY Studio. Now in its second edition, the trailblazing introduction and textbook on construction includes a new section on translucent materials and an article on the use of glass. **Illustrated Guide to the International Plumbing & Fuel Gas Codes**, Howard C. Massey, 2002-07. Packed with plumbing isometrics and helpful illustrations, this guide makes clear the code requirements for installing materials for plumbing and gas systems. Includes code tables for pipe sizing and fixture units and code requirements for just about all areas of plumbing from water supply and vents to sanitary drainage systems. Building automation systems and digital technologies are highly relevant for the environmental and energy performance of buildings. However, a clear gap remains between architectural engineering and the use of such technologies. *Building Automation and Digital Technologies* shows how to assimilate automation and digital technologies into making buildings smarter and more environmentally sustainable. This book shows why architects need smart and digital systems in building design and construction and promotes innovative technological tools for improving sustainability. It focuses on the development of automated environmental conditions and how new technology informs architectural engineering. The book also provides new evidence on the impact of building automation systems and digital technologies such as the Internet of Things, artificial intelligence and information and communication technology for developing a performance-based approach to the

environmental sustainability of buildings and provides a key reference for architects on how digital technology can inform their practice Its four chapters cover developing strategies for improving sustainable and smart buildings architectural practice and construction technology creativity and innovation in building automation systems and the use phase of buildings Building Automation and Digital Technologies meets a critical need for a sustainable and smart built environment from an architectural perspective providing an important reference to architects and professionals in related fields by demonstrating the assimilation of the latest information and automation technologies Puts forward an architectural perspective on the design and construction of smart sustainable buildings Presents the use of digital technologies for design and construction Bridges the gap between architectural engineering and the use of automation and digital technology Considers the development of automated environmental conditions and new technology
