industrial applications that gradually increase in complexity. These applications include among others power generation by large and small systems and cryogenic systems for the manufacturing chemical and food processing industries. This unique book draws on the best contemporary thinking about design and design methodology including discussions of concurrent design and quality function deployment. Recent developments based on the second law of thermodynamics are also included especially the use of exergy analysis, entropy generation minimization and thermoeconomics. To demonstrate the application of important design principles introduced a single case study involving the design of a cogeneration system is followed throughout the book. In addition, Thermal Design and Optimization is one of the best new sources available for meeting the recommendations of the Accreditation Board for Engineering and Technology for more design emphasis in engineering curricula. Supported by extensive reference lists, end of chapter problem sets and helpful appendices, this is a superb text for both the classroom and self study and for use in industrial design development and research.
