Causal Modeling Quantitative Applications In The Social Sciences:

A Research Primer for the Social and Behavioral Sciences Miriam Schapiro Grosz, Hyman Sardy, 2014-05-10 A Research Primer for the Social and Behavioral Sciences provides an introductory but comprehensive overview of the research process that primarily concerns human subjects This book discusses the methods of acquiring knowledge importance of a well chosen problem review of the literature and relationship between theory building and hypothesis testing The common sources of invalidity in practice non experimental research types Stevens classification of scales and estimation based on probabilistic sampling are also elaborated This text likewise covers the role of computer in research techniques for analysis of data univariate and bivariate statistics and assumptions underlying analysis of variance Other topics include the canonical correlation analysis non parametric analysis of variance deterministic problem analysis techniques and common errors in presentation of findings This publication is intended for novice investigators in the broad category of social and behavioral sciences

results including Obtaining valid reliable and credible performance data Engaging and working with stakeholders to design valuable evaluations and performance monitoring systems Assessing program outcomes and tracing desired outcomes to program activities Providing robust analyses of both quantitative and qualitative data Governmental bodies foundations individual donors and other funding bodies are increasingly demanding information on the use of program funds and program results The Handbook of Practical Program Evaluation shows you how to collect and present valid and reliable data about programs

Causality in Sociological Research Jakub Karpinski, 2012-12-06 The general treatment of problems connected with the causal conditioning of phenomena has traditionally been the domain of philosophy but when one examines the relationships taking place in the various fields the study of such conditionings belongs to the empirical sciences Sociology is no exception in that respect In that discipline we note a certain paradox Many problems connected with the causal conditioning of phenomena have been raised in sociology in relatively recent times and that process marked its empirical or even so called empiricist trend That trend labelled positivist seems in this case to be in contradiction with a certain type of positivism Those authors who describe positivism usually include the Humean tradition in its genealogy and remembering Hume's criticism of the concept of cause speak about positivism as about a trend which is inclined to treat lightly the study of causes and confines itself to the statements on co occurrence of phenomena *Causal modeling*, 1989

Statistics Gudmund R. Iversen, Mary Gergen, 2012-12-06 discussed in this book It is clear that with an understanding of the main ideas of statistics engaged citizens can grasp what the professional number crunchers have produced and evaluate the results This book grew out of a course designed by Gudmund R Iversen to meet the challenges created by this greater reliance on statistical It was one of a series of courses designed at Swarthmore information College to fulfill the mission of a liberal arts college to educate its students for the challenges of the twenty first century The idea was that students should not become so involved with the intricacies of a single discipline that they lose sight of the big picture These courses were intended to educate students to understand how the major ideas of a field relate to the world In many respects statistics seemed an ideal subject for one such course While statistics could be a mystifying self aggrandized and esoteric discipline it could also be a key to understanding many other disciplines The course Stat 1 Statistical Thinking was created to produce this understanding The course proved to be very popular and each year it grew in size Over time the lecture notes for the course became more refined and extensive and eventually the course material served as the basis for this book Formulas As most statistics instructors are keenly aware the teaching of statistics has changed dramatically *Analyzing Panel Data*

Gregory B. Markus, 1979 Discusses an array of techniques for the analysis of data collected on the same units of analysis the panel at two or more points in time **The Economic Costs of Alcohol and Drug Abuse in the United States, 1992**

Henrick J. Harwood, Douglas Fountain, Gina Livermore, 1998 *Teaching European Citizens. A Quasi-experimental Study in Six Countries* Georg Weißen, Valentin Eck, 2009 In the framework of the EU funded project TEESAEC an instructional

research project was conducted in six European countries Austria Estonia Germany The Netherlands Switzerland United Kingdom In the quasi experimental study an innovative series of lessons on the European Union was introduced into politics lessons in the form of a WebQuest The intervention study aimed to determine whether the problem based learning environment WebQuest leads to greater cognitive outcomes as compared with traditional lessons in politics Knowledge increase was assessed in 14 to 16 year old students by means of a knowledge test applied before and after the intervention The test items employed in TEESAEC cover basic literacy competences which are of use in situations in which concrete political knowledge is to be applied The reports from the six countries involved present the gains associated with lessons in politics revealing not only strengths but also weaknesses of politics lessons The current volume presents the main results of the study

Introduction to Survey Sampling Graham Kalton, 1983-09 Reviews sampling methods used in surveys simple random sampling systematic sampling stratification cluster and multi stage sampling sampling with probability proportional to size two phase sampling replicated sampling panel designs and non probability sampling Kalton discusses issues of practical implementation including frame problems and non response and gives examples of sample designs for a national face to face interview survey and for a telephone survey He also treats the use of weights in survey analysis the computation of sampling errors with complex sampling designs and the determination of sample size

Understanding Regression Assumptions William Dale Berry, 1993-02-25 Through the use of careful explanation and examples Berry demonstrates how to consider whether the assumptions of multiple regression are actually satisfied in a particular research project Beginning with a brief review of the regression assumptions as they are typically presented in text books he moves on to explore in detail the substantive meaning of each assumption for example lack of measurement error absence of specification error linearity homoscedasticity and lack of auto correlation

Demography: Analysis and Synthesis, Four Volume Set Graziella Caselli, Jacques Vallin, Guillaume Wunsch, 2006-01-03 This four volume collection of over 140 original chapters covers virtually everything of interest to demographers sociologists and others Over 100 authors present population subjects in ways that provoke thinking and lead to the creation of new perspectives not just facts and equations to be memorized The articles follow a theory methods applications approach and so offer a kind of one stop shop that is well suited for students and professors who need non technical summaries such as political scientists public affairs specialists and others Unlike shorter handbooks Demography Analysis and Synthesis offers a long overdue thorough treatment of the field Choosing the analytical method that fits the data and the situation requires insights that the authors and editors of Demography Analysis and Synthesis have explored and developed This extended examination of demographic tools not only seeks to explain the analytical tools themselves but also the relationships between general population dynamics and their natural economic social political and cultural environments Limiting themselves to human populations only the authors and editors cover subjects that range from the core building blocks of population change fertility mortality and migration to the consequences of

demographic changes in the biological and health fields population theories and doctrines observation systems and the teaching of demography The international perspectives brought to these subjects is vital for those who want an unbiased rounded overview of these complex multifaceted subjects Topics to be covered Population Dynamics and the Relationship Between Population Growth and Structure The Determinants of Fertility The Determinants of Mortality The Determinants of Migration Historical and Geographical Determinants of Population The Effects of Population on Health Economics Culture and the Environment Population Policies Data Collection Methods and Teaching about Population Studies All chapters share a common format Each chapter features several cross references to other chapters Tables charts and other non text features are widespread Each chapter contains at least 30 bibliographic citations

Sorting Data Anthony Peter Macmillan Coxon,1999-07-08 The method of sorting is a flexible easily used and enjoyable technique well suited to exploring and mapping conceptual domains to the study of subjective or folk classifications and to comparing existing classifications one with another Originating in linguistics and psychology sorting methods also known as own categories and pile sorting have diffused to a wide range of other social sciences This book provides the first systematic introduction to the method of sorting and draws material from new and widely scattered sources It covers the collection and analysis of data using free sorting as the main focus but includes other variants Methods are provided for describing and comparing sortings drawing on recent developments in partition theory and combinational analysis and for measuring their similarity Appropriate methods are presented for the representation of both individual sortings and of the objects themselves multidimensional scaling correspondence analysis and clustering techniques Applications and available software are covered

Typologies and Taxonomies Kenneth D. Bailey,1994-06-13 How do we group different subjects on a variety of variables Should we use a classification procedure in which only the concepts are classified typology one in which only empirical entities are classified taxonomy or some combination of both In this clearly written book Bailey addresses these questions and shows how classification methods can be used to improve research Beginning with an exploration of the advantages and disadvantages of classification procedures including those typologies that can be constructed without the use of a computer the book covers such topics as clustering procedures including agglomerative and divisive methods the relationship among various classification techniques including the relationship of monothetic qualitative typologies to polythetic quantitative taxonomies a comparison of clustering methods and how these methods compare with related statistical techniques such as factor analysis multidimensional scaling and systems analysis and lists classification resources This volume also discusses software packages for use in clustering techniques

Spatial Regression Models Michael Don Ward,Kristian Gleditsch (jurist),2008-02-29 Assuming no prior knowledge this book is geared toward social science readers unlike other volumes on this topic The text illustrates concepts using well known international comparative and national examples of spatial regression analysis Each example is presented alongside relevant data and code which is also available on a Web site

Khamis, 2011-01-12 This practical guide teaches nonstatisticians how to analyze and interpret loglinear models using the multigraph The Association Graph and the Multigraph for Loglinear Models will help students particularly those studying the analysis of categorical data to develop the ability to evaluate and unravel even the most complex loglinear models without heavy calculations or statistical software This supplemental text reviews loglinear models explains the association graph and introduces the multigraph to students who may have little prior experience of graphical techniques but have some familiarity with categorical variable modeling The author presents logical step by step techniques from the point of view of the practitioner focusing on how the technique is applied to contingency table data and how the results are interpreted **Approaches to Mixed Methods Research** Lisa D. Pearce, Jessica Halliday Hardie, 2024-12-17 Approaches to Mixed Methods Research focuses on the choices social scientists make when designing a study that mixes quantitative and qualitative data Authors Lisa D Pearce and Jessica Halliday Hardie explore ways to weave together strands of research using qualitative and quantitative data to speak to and enhance each other a strand being a series of steps involved in collecting and analyzing a single type of data The result they show is a more holistic body of evidence that emerges and they illustrate this with examples from a wide range of studies from the United States and other countries *An Introduction to Generalized Linear Models* George H. Duntelman, Moon-Ho R. Ho, 2006 Do you have data that is not normally distributed and don't know how to analyze it using generalized linear models GLM Beginning with a discussion of fundamental statistical modeling concepts in a multiple regression framework the authors extend these concepts to GLM including Poisson regression logistic regression and proportional hazards models and demonstrate the similarity of various regression models to GLM Each procedure is illustrated using real life data sets and the computer instructions and results will be presented for each example Throughout the book there is an emphasis on link functions and error distribution and how the model specifications translate into likelihood functions that can through maximum likelihood estimation be used to estimate the regression parameters and their associated standard errors This book provides readers with basic modeling principles that are applicable to a wide variety of situations Key Features Provides an accessible but thorough introduction to GLM exponential family distribution and maximum likelihood estimation Includes discussion on checking model adequacy and description on how to use SAS to fit GLM Describes the connection between survival analysis and GLM This book is an ideal text for social science researchers who do not have a strong statistical background but would like to learn more advanced techniques having taken an introductory course covering regression analysis **A Mathematical Primer for Social Statistics** John Fox, 2020-12-06 A Mathematical Primer for Social Statistics Second Edition presents mathematics central to learning and understanding statistical methods beyond the introductory level

the basic language of matrices and linear algebra and its visual representation vector geometry differential and integral calculus probability theory common probability distributions statistical estimation and inference including likelihood based and Bayesian methods The volume concludes by applying mathematical concepts and operations to a familiar case linear least squares regression The Second Edition pays more attention to visualization including the elliptical geometry of quadratic forms and its application to statistics It also covers some new topics such as an introduction to Markov Chain Monte Carlo methods which are important in modern Bayesian statistics A companion website includes materials that enable readers to use the R statistical computing environment to reproduce and explore computations and visualizations presented in the text The book is an excellent companion to a math camp or a course designed to provide foundational mathematics needed to understand relatively advanced statistical methods
