and informed search strategies There is a wide diversity in the languages and idioms used for providing meta descriptions from simple structured text in metadata schemas to formal annotations using ontologies and the technologies for storing sharing and exploiting meta descriptions are also diverse and evolve rapidly In addition there is a proliferation of schemas and standards related to metadata resulting in a complex and moving technological landscape hence the need for specialized knowledge and skills in this area The Handbook of Metadata Semantics and Ontologies is intended as an authoritative reference for students practitioners and researchers serving as a roadmap for the variety of metadata schemas and ontologies available in a number of key domain areas including culture biology education healthcare engineering and library science
