

Drive the new oil seal up to the main bearing with the lip and spring towards the bearing. Press the high gear into the bearing. Lubricate the ground tapered boss of the sprocket with oil and slide it onto the high gear. Screw on the securing nut finger tight.

Re-mesh the rear chain with the sprockets and replace the connecting link. Apply the rear brake and tighten the sprocket securing nut as tight as possible using service tool Z63. (See Fig. D7.)

Smear the extended nose of the high gear (or on earlier models smear the bronze bush protruding from the mainshaft high gear) with oil and replace the circular cover plate using a new paper gasket.

Lubricate the camplate spindle and offer it into the spindle housing within the gearbox. Assemble the camplate plunger and spring into the domed plunger retaining nut and screw it into position underneath

Place the camplate rollers onto the selector forks and hold them in position with grease. Position the selector forks in their respective grooves in the gears as shown in Fig. D11. (The fork with the smaller radius is for the mainshaft cluster). The assembly is now ready to be offered into the gearbox housing. As the mainshaft and layshaft are being located in their respective bearings, the gears should be slid into position and aligned so that the selector fork rollers locate in the roller tracks in the camplate

Fig. D11. Reassembling the gearbox components. Arrows indicate camplate rollers in position and thrust washer correctly located

the gearbox, but do not forget the fibre washer. Set the camplate with the plunger located to the notch between second and third gear (see Fig. D10). Locate the bronze thrust washer over the inner needle roller bearing. The thrust washer can be held in position by smearing its rear surface with grease. Note that the grooved surface of the thrust washer is towards the layshaft. (See Fig. D11).

Lubricate the mainshaft and layshaft captive gears, then assemble the mainshaft and layshaft gear clusters as shown in Fig. D11.

and the bores for the selector forks are approximately aligned. Smear the selector fork spindle with oil and slide it through the selector forks, shoulder end first, until it is fully engaged in the gearbox housing. The mainshaft selector fork will be noted to be in the innermost position.

Check the camplate operating quadrant is moving freely in the inner cover and position the bronze layshaft thrust washer over the needle roller bearing in the inner cover. Again, use grease to hold the thrust washer in position during assembly.
