START UP PROCEDURE

Use the procedure when an engine is started for the first time after work is done on the fuel system or gasket.

1. Disconnect the air inlet system from the turbochargers.
2. Have a person in position near each turbocharger air inlet with a piece of steel plate large enough to completely cover the turbocharger air inlet.

WARNING

Be careful when plate is put against air inlet opening. Due to excessive suction, the plate can be pulled quickly against air inlet openings. To avoid crushed fingers, do not put fingers between plate and air inlet opening.

3. Start the engine. If the engine starts to run too fast or runs out of control, immediately put the steel plates against the turbocharger air inlets. This will stop the air supply to the engine, and the engine will stop.
