**Practical Embedded Security** Timothy Stapko, 2011-04-01 The great strides made over the past decade in the complexity and network functionality of embedded systems have significantly enhanced their attractiveness for use in critical applications such as medical devices and military communications. However, this expansion into critical areas has presented embedded engineers with a serious new problem: their designs are now being targeted by the same malicious attackers whose predations have plagued traditional systems for years. Rising concerns about data security in embedded devices are leading engineers to pay more attention to security assurance in their designs than ever before. This is particularly challenging due to embedded devices' inherent resource constraints such as limited power and memory. Therefore, traditional security solutions must be customized to fit their profile, and entirely new security concepts must be explored. However, there are few resources available to help engineers understand how to implement security measures within the unique embedded context. This new book from embedded security expert Timothy Stapko is the first to provide engineers with a comprehensive guide to this pivotal topic. From a brief review of basic security concepts through clear explanations of complex issues such as choosing the best cryptographic algorithms for embedded utilization, the reader is provided with all the information needed to successfully produce safe, secure embedded devices. The ONLY book dedicated to a comprehensive coverage of embedded security. Covers both hardware and software-based embedded security solutions for preventing and dealing with attacks. Application case studies support practical explanations of all key topics, including network protocols, wireless and cellular communications, languages, Java and C compilers, web-based interfaces, cryptography, and an entire section on SSL. **From Database to Cyber Security** Pierangela Samarati, Indrajit Ray, Indrakshi Ray, 2018-11-30 This Festschrift is in honor of Sushil Jajodia, Professor in the George Mason University, USA, on the occasion of his 70th birthday. This book contains papers written in honor of Sushil Jajodia of his vision and his achievements. Sushil has sustained a highly active research agenda spanning several important areas in computer security and privacy and established himself as a leader in the security research community through unique scholarship and service. He has extraordinarily impacted the scientific and academic community, opening and pioneering new directions of research and significantly influencing the research and development of security solutions worldwide. Also, his excellent record of research funding shows his commitment to sponsored research and the practical impact of his work. The research areas presented in this Festschrift include membrane computing, spiking neural networks, phylogenetic networks, ant colonies, optimization, workbench for bio-computing, reaction systems, entropy of computation, rewriting systems, and insertion-deletion systems. **Computer Security - ESORICS 2020** Liqun Chen, Ninghui Li, Kaitai Liang, Steve Schneider, 2020-09-11 The two-volume set LNCS 12308/12309 constitutes the proceedings of the 25th European Symposium on Research in Computer Security, ESORICS 2020, which was held in September 2020.
