Taming Information Technology Eser Kandogan, 2012-09-06 Information technology is at the center of modern life. It supports most day to day activities: talking on the phone, getting money from an ATM or working in the office. Whether for work, commerce or fun, we interact with computers, networks and databases: all sorts of information technology. How does it work? Certainly technological advances helped create this world. But what keeps it running? The answer is people. These people, computer system administrators, are the unsung heroes of the modern age. This book, ten years in the making, is the result. It tells the story of system administration through the narratives of real system administrators. It documents dynamic systems of people and machines of specialists working together to tame hugely complex information technology infrastructures, developing and adapting their own tools and practices over time to create productive work environments. The authors hope *Taming Information Technology* will lead the way to a future in which the important work of these IT workers is better appreciated, better understood and better supported.

Global Social Media Design Huatong Sun, 2020 Social media users fracture into tribes, but social media ecosystems are globally interconnected, technically, socially, culturally and economically. At the crossroads, Sun presents theory, method and case studies to uncover the global interconnectedness of social media design and to bridge differences. She articulates a critical design framework with design tools to redress asymmetrical relations in everyday practice and provides three cross-cultural social media design and use cases: Facebook, Japan Weibo and global competition of WhatsApp, WeChat, LINE and KakaoTalk. She calls to reshape the crossroads into a design square where differences are nourished as resources where diverse discourses interact for innovation and where alternative epistemes thrive.

Personal Data in Competition, Consumer Protection and Intellectual Property Law Mor Bakhoum, Beatriz Conde Gallego, Mark-Oliver Mackenrodt, Gintarė Surblytė-Namavičienė, 2018-11-02 This book analyses the legal approach to personal data taken by different fields of law. An increasing number of business models in the digital economy rely on personal data as a key input. In exchange for sharing their data online, users benefit from personalized and innovative services. But companies' collection and use of personal data raise questions about privacy and fundamental rights. Moreover, given the substantial commercial and strategic value of personal data, their accumulation, control and use may raise competition concerns and negatively affect consumers. To establish a legal framework that ensures an adequate level of protection of personal data while at the same time providing an open and level playing field for businesses to develop innovative data-based services is a challenging task. With this objective in mind and against the background of the uniform rules set by the EU General Data Protection Regulation, the contributions to this book examine the significance and legal treatment of personal data in competition law, consumer protection law, general civil law and intellectual property law. Instead of providing an isolated analysis of the different areas of law, the book focuses on both synergies and tensions between the different legal fields, exploring potential ways to develop an integrated legal approach to personal data.
