Polarization
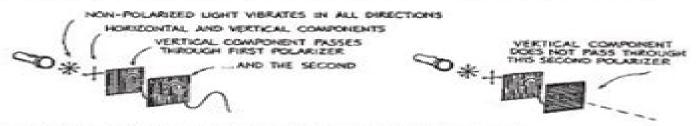

The amplitude of a light wave has magnitude and direction and can be represented by a vector. Polarized light vibrates in a single direction and is represented by a single vector. To the left, the single vector represents vertically polarized light. The vibrations of non-polarized light are equal in all directions. There are as many vertical components as horizontal components. The pair of perpendicular vectors to the right represents non-polarized light.
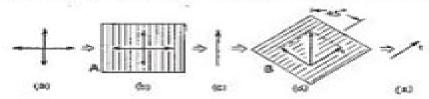

1. In the sketch below, non-polarized light from a flashlight strikes a pair of polarizing filters.

NON-POLARIZED LIGHT VIBRATES IN ALL DIRECTIONS
HORIZONTAL AND VERTICAL COMPONENTS
VERTICAL COMPONENT PASSES THROUGH FIRST POLARIZER
...AND THE SECOND

VERTICAL COMPONENT DOES NOT PASS THROUGH THIS SECOND POLARIZER

a. Light is transmitted by a pair of polarizing filters when their axes are
(aligned) (crossed at right angles)

and light is blocked when their axes are
(aligned) (crossed at right angles).

b. Transmitted light is polarized in a direction
(the same as) (different than) the polarization axis of the filter.

2. Consider the transmission of light through a pair of polarizing filters with polarization axes at 45° to each other. Although in practice the polarizing filters are one atop the other, we show them spread out side by side below. From left to right: (a) Non-polarized light is represented by its horizontal and vertical components. (b) These components strike filter A. (c) The vertical component is transmitted, and (d) falls upon filter B. This vertical component is not aligned with the polarization axis of filter B, but it has a component that is — component **t**; (e) which is transmitted.

a. The amount of light that gets through Filter B, compared to the amount that gets through Filter A is
(more) (less) (the same).

b. The component perpendicular to **t** that falls on Filter B is
(also transmitted) (absorbed).

Integrating Design and Manufacturing for Competitive Advantage Gerald I. Susman,1992 With more emphasis being placed on the cost and quality of new products and on reducing the lead time to develop them attention is turning to the increasingly important topic of design for manufacturing DFM This involves the collaboration among research and development manufacturing and other company functions and is aimed at accelerating the new product development process from product conception to market introduction A company can create a competitive advantage for itself by managing the process and its related organizational dynamics effectively This collection of essays focuses on the development of strategic capabilities through use of DFM tools and practices the role of DFM in specific product development phases and the social political and cultural context within which DFM is introduced   **The 1972 World Heritage Convention** Francesco Francioni,Federico Lenzerini,2023 This commentary examines the Convention Concerning the Protection of the World Cultural and Natural Heritage the UNESCO World Heritage Convention fifty years after its adoption It explores the new challenges which have arisen in the management of world heritage sites and the Convention s impact on the evolution of international heritage law   Eureka Math Grade 3 Study Guide Great Minds,2015-11-09 Eureka Math is a comprehensive content rich PreK 12 curriculum that follows the focus and coherence of the Common Core State Standards in Mathematics CCSSM and carefully sequences the mathematical progressions into expertly crafted instructional modules The companion Study Guides to Eureka Math gather the key components of the curriculum for each grade into a single location unpacking the standards in detail so that both users and non users of Eureka Math can benefit equally from the content presented Each of the Eureka Math Curriculum Study Guides includes narratives that provide educators with an overview of what students should be learning throughout the year information on alignment to the instructional shifts and the standards design of curricular components approaches to differentiated instruction and descriptions of mathematical models The Study Guides can serve as either a self study professional development resource or as the basis for a deep group study of the standards for a particular grade For teachers who are new to the classroom or the standards the Study Guides introduce them not only to Eureka Math but also to the content of the grade level in a way they will find manageable and useful Teachers familiar with the Eureka Math curriculum will also find this resource valuable as it allows for a meaningful study of the grade level content in a way that highlights the coherence between modules and topics The Study Guides allow teachers to obtain a firm grasp on what it is that students should master during the year The Eureka Math Curriculum Study Guide Grade 3 provides an overview of all of the Grade 3 modules including Properties of Multiplication and Division and Solving Problems with Units of 2 5 and 10 Place Value and Problem Solving with Units of Measure Multiplication and Division with Units of 0 1 6 9 and

Göransson,2021-02-18 The theory of evolution is considered the unifying theory of biology An accurate understanding of evolution is vital both for the understanding of diverse topics in biology but also for societal issues such as antibiotic resistance or biodiversity In contrast decades of research in science education have revealed that students have difficulties to accurately understand evolutionary processes such as mutation and natural selection The majority of this research relies on a conceptual framework of so called key concepts variation selection inheritance derived from scholarly descriptions of natural selection Recent research suggests that non domain specific concepts such as randomness probability spatial and temporal scales so called threshold concepts are important for evolution understanding in addition to the key concepts Thus many important elements of evolutionary theory are counter intuitive or lie outside direct perception Hence representations such as visualizations models and simulations are considered to be important for teaching and learning evolution While the importance of visualizations is generally acknowledged for science education less is known about how visual design can facilitate students understanding of threshold concepts such as random mutations or spatial scales This thesis uses the Model of Educational Reconstruction MER as the guiding framework for exploring the significance of threshold concepts by analysing the conceptual content of students explanations and extant visualizations of natural selection MER combines scientific content with teaching and learning perspectives for the analysis and design of learning environments Content analysis of visualizations available online showed that most fail to fully represent the basic principles of natural selection variation selection and inheritance Moreover the representational potential of visualizations was seldom used to represent threshold concepts such as randomness in origin of variation Visualizations were also biased to animals as the context of evolution Similarly upper secondary and tertiary students explanations of natural selection were seldom complete in terms of the basic principles and threshold concepts such as randomness were often lacking Especially significant was the almost complete lack of randomness in upper secondary students explanations In addition threshold concepts were context sensitive across the items used bacteria cheetah and salamander for example spatial scale and randomness was significantly more common in responses to the bacteria item compared to the cheetah and salamander items Considering the results from these studies three interactive visualizations were developed evolution of antibiotic resistance and fur colouration in mice The visualization design was conducted iteratively following a Design Based Research approach and evaluated in classroom settings in secondary and upper secondary Swedish schools The results showed that visualizations targeting randomness and genetic level events such as mutations can guide students towards a more scientific conception of natural selection However

there were differences across the visualizations and student samples In addition while students often inferred randomness from the visuals the results showed that integration of randomness into explanations of natural selection may be challenging Hence future research should explore the role of guidance and reflection for students understanding of randomness The thesis also discusses the role of students intuitive conceptions in relation to the use of interactive visualizations and how these preconceptions interact with the presented message By using the theory of frame semantics framing effects and conceptual integration students issues of achieving an accurate understanding of evolution are discussed in relation to the theory of conceptual change Implications for teaching and learning natural selection as well as visualization design for learning are also discussed Evolutionsteorin f rs ofta fram som biologins f renande teori Vikten av en korrekt och anv ndbar evolutionsf rst else har d rf r ofta betonats inte minst f r elevers f rst else inom biologins olika delomr den men ocks f r att fatta beslut i samh llsfr gor som exempelvis antibiotikaresistens M nga av de centrala delarna av evolutionsteorin r kontraintuitiva eller abstrakta och decennier av forskning har visat att elever har sv righeter att f rst evolution ra processer som mutation och naturligt urval Representationer s som visualiseringar modeller och simuleringar r d rf r viktiga f r att ge elever direkta erfarenheter av evolution ra processer ven om vikten av visualiseringar r allm nt accepterad inom naturvetenskapsundervisning s r det mindre k nt hur visualiseringars utformning specifikt bidrar till att utveckla elevers f rst else av vetenskapliga fenomen s som evolution Dessutom har forskningen p elevers evolutionsf rst else till stor del fokuserat p s kallade nyckelbegrepp variation selektion och arv som h rletts fr n vetenskapliga beskrivningar av evolutionsteorin Dessa begrepp antas vara n dv ndiga men ocks tillr ckliga f r elevers evolutionsf rst else Dock har vikten av icke dom nspecifika begrepp kopplade till evolutionsteorin s som slump sannolikhet spatial och temporala skalor s kallade tr skelbegrepp inte unders kts i n gon h gre grad Den h r avhandlingen anv nder Model of Educational Reconstruction f r att utforska betydelsen av tr skelbegrepp f r evolutionsf rst else Med utg ngspunkt i den vetenskapliga beskrivningen och historiken unders ks f rekomsten av tr skelbegrepp i befintliga visualiseringar f r l rande samt elevers f rklaringar f r att formulera designprinciper f r interaktiva visualiseringar av evolution Dessutom beskrivs utvecklingen av ett antal interaktiva visualiseringar samt unders kningar av deras potentiella anv ndning i klassrumsmilj er Avhandlingen diskuterar ven betydelsen av elevers intuitiva f rest llningar i relation till anv ndandet av interaktiva visualiseringar och hur dessa f rest llningar interagerar med det presenterade budskapet Genom anv ndning av ramsemantisk teori inklusive framingeffekter och blendteori diskuteras elevers sv righeter och utveckling av en vetenskaplig evolutionsf rst else i relation till tidigare teorier om begreppsf r ndring Konsekvenser av ramsemantisk teori och framingeffekter i visuella medier diskuteras ven i relation till visuell design f r l rande
