A Student's Guide to Newton's Laws of Motion Sanjoy Mahajan, 2020-06-18 Master Newton s laws of motion the basis of modern science and engineering with this intuitive and accessible text **ENC Focus ,1999 Lecture-free Teaching Bonnie S. Wood,2009 Innovative Curriculum Materials ,1999 El-Hi Textbooks & Serials in Print, 2003 ,2003 Scientific Knowledge as a Culture Igal Galili,2022-02-01 This book in its first part contains units of conceptual history of several topics of physics based on the research in physics education and research based articles with regard to several topics involved in teaching science in general and physics in particular The second part of the book includes the framework used the approach considering science knowledge as a special type of culture discipline culture Within this approach scientific knowledge is considered as comprised of a few inclusive fundamental theories each hierarchically structured in a triadic pattern nucleus body periphery While nucleus incorporates the basic principles and body comprises their implementations in the variety of laws models and experiments periphery includes concepts at odds to the nucleus This structure introduces knowledge in its conceptual variation thus converting disciplinary knowledge to cultural disciplinary one The approach draws on history and philosophy of science HPS necessary for meaningful learning of science It is exemplified in several aspects regarding teaching physics presenting history in classes considering the special nature of science and using artistic images in regular teaching The revealed conceptual debate around the chosen topics clarifies the subject matter for school students and teachers encouraging construction of Cultural Content Knowledge Often missed in teachers preparation and common curriculum it helps genuine understanding of science thus providing remedy of students misconceptions reported in educational research **El-Hi Textbooks & Serials in Print, 2000 ,2000 Books in Print Supplement ,2002****

Forthcoming Books Rose Arny,2000-06 Theologies of Creation Thomas Jay Oord,2014-10-02 Humans have long wondered about the origin of the universe And such questions are especially alive today as physicists offer metaphysical theories to account for the emergence of creation Theists have attributed the universe s origin to divine activity and many have said God created something from absolute nothingness The venerable doctrine of creatio ex nihilo especially emphasizes God s initial creating activity Some contributors to this book explore new reasons creatio ex nihilo should continue to be embraced today But other contributors question the viability of creation from nothing and offer alternative initial creation options in its place These new alternatives explore a variety of options in light of recent scientific work new biblical scholarship and both new and old theological traditions **Looking to the Future Derek Hodson,2011-10-25 In advocating an action oriented and issues based curriculum this book takes the position that a major but shamefully neglected goal of science and technology education is to equip students with the knowledge skills attitudes and values to confront the complex and often ill defined socioscientific issues they encounter in daily life as citizens in an increasingly technology dominated world carefully critically confidently and responsibly In outlining proposals for addressing socioscientific issues**

through a curriculum organized in terms of four increasingly sophisticated levels of consideration the author adopts a highly critical and politicized stance towards the norms and values that underpin both scientific and technological development and contemporary scientific engineering and medical practice criticizes mainstream STS and STSE education for adopting a superficial politically naïve and hence educationally ineffective approach to consideration of socioscientific issues takes the view that environmental problems are social problems occasioned by the values that underpin the ways in which we choose to live and urges teachers to encourage students to reach their own views through debate and argument about where they stand on major socioscientific issues including the moral ethical issues they often raise More controversially the author argues that if students are to become responsible and politically active citizens the curriculum needs to provide opportunities for them to experience and learn from sociopolitical action The relative merits of direct and indirect action are addressed notions of learning about action learning through action and learning from action are developed and a case is made for compiling a user friendly database reflecting on both successful and less successful action oriented curriculum initiatives Finally the book considers some of the important teacher education issues raised by this radically new approach to teaching and learning science and technology The book is intended primarily for teachers and student teachers of science technology and environmental education graduate students and researchers in education teacher educators curriculum developers and those responsible for educational policy The author is Emeritus Professor of Science Education at the Ontario Institute for Studies in Education University of Toronto Adjunct Professor of Science Education at the University of Auckland and Visiting Professor of Science Education at the University of Hong Kong His research interests include considerations in the history philosophy and sociology of science and their implications for science and technology education STSE education and the politicization of both students and teachers science curriculum history multicultural and antiracist education and teacher education via action research

Climate Change and Political Theory Catriona McKinnon, 2022-09-07 Climate change is an ethical failure Floods fires droughts and extreme weather caused by climate change are already killing people and ruining lives on a massive scale These avoidable impacts hurt the most vulnerable among us first and worst Why have we failed to prevent climate change How can we mobilise to do better politically socially and economically Where does the greatest responsibility for action lie In this book Catriona McKinnon unravels the vital contributions made by engaged political theory to urgent climate challenges left unmet by a lack of political will These challenges and our political inertia cannot be tackled without addressing questions of responsibility collective duty fairness harm techno optimism the value of nature and the future of humanity McKinnon's philosophical analysis is interwoven with discussion of the latest climate science current politics and policies and emerging technologies in order to show that we will not find acceptable routes out of the climate crisis without the compass of political theory *Climate Change and Political Theory* provides readers of all backgrounds and levels with a lucid distillation of and curated guide to the political theory and ethics of climate change
