Thinking Physics for Teaching C. Bernardini, C. Tarsitani, M. Vicentini, 2012-12-06 The research in Physics Education has to do with the search of solutions to the complex problem of how to improve the learning and teaching of physics The complexity of the problem lies in the different fields of knowledge that need to be considered in the research In fact besides the disciplinary knowledge in physics which must be considered from the conceptual the historical and the epistemological framework one has to take into account some basic knowledge in the context of psychology and the cognitive sciences for the general and contextual aspects of learning and some basic knowledge in education and communication for what concerns teaching skills and strategies Looking back at the historical development of the research one may recognize that the complexity of the endeavour was not clear at first but became clear in its development which shifted the focus of the research in the course of time from physics to learning to teaching We may say that the research started more than 30 years ago with a focus on disciplinary knowledge Physicists in different parts of the western world after research work in some field of physics decided to concentrate on the didactical communication of physical knowledge

Stealth Assessment Valerie Jean Shute, Matthew Ventura, 2013 An approach to performance based assessments that embeds assessments in digital games in order to measure how students are progressing toward targeted goals To succeed in today's interconnected and complex world workers need to be able to think systemically creatively and critically Equipping K 16 students with these twenty first century competencies requires new thinking not only about what should be taught in school but also about how to develop valid assessments to measure and support these competencies In Stealth Assessment Valerie Shute and Matthew Ventura investigate an approach that embeds performance based assessments in digital games They argue that using well designed games as vehicles to assess and support learning will help combat students growing disengagement from school provide dynamic and ongoing measures of learning processes and outcomes and offer students opportunities to apply such complex competencies as creativity problem solving persistence and collaboration Embedding assessments within games provides a way to monitor players progress toward targeted competencies and to use that information to support learning Shute and Ventura discuss problems with such traditional assessment methods as multiple choice questions review evidence relating to digital games and learning and illustrate the stealth assessment approach with a set of assessments they are developing and embedding in the digital game Newton's Playground These stealth assessments are intended to measure levels of creativity persistence and conceptual understanding

of Newtonian physics during game play Finally they consider future research directions related to stealth assessment in education

Tools for Teaching Conceptual Understanding, Elementary Julie Stern, Nathalie Lauriault, Krista Ferraro, 2017-09-16 Harness natural curiosity for conceptual understanding Young children are naturally curious asking deep questions about complex concepts This tendency is a talent that can be nurtured so that children grow to be deep thinkers and innovators later in life However in our complex world it is impossible to teach students everything they need to know Pushing more factual content ignores what we know about how children learn and endangers their love of learning Concept based teaching helps young learners uncover conceptual relationships in a way that is developmentally appropriate Readers of this guide will learn Why conceptual learning is a natural fit for children Strategies for introducing conceptual learning Instructional strategies to help students uncover and transfer concepts How to write lessons assess understanding and differentiate in a concept based classroom How concept based teaching aligns with best practices and initiatives Written for educators who strive to cultivate conceptual understanding while honoring students innate curiosity this is a must have road map for implementing concept based teaching in elementary classrooms This book provides the research and resources educators need to help students take ownership of their learning It fosters students curiosity about their environment and it allows them to explore and become life long learners Ellen Asregadoo Fifth Grade Teacher Public School 190 Brooklyn NY This is an important book for all teachers We need to be honoring our students as thinkers who deserve developmentally appropriate intellectual rigor in the classroom We will not achieve this in our traditional coverage based classroom I am so inspired and can t wait to start this journey making mistakes and learning along the way Sarah Gat Second Grade Teacher Ecole Arbour Vista Public School
