*The Short Range Anti-Gravitational Force and the Hierarchically Stratified Space-Time Geometry in 12 Dimensions* Christina Anne Knight, 2010-08-09

The field of cosmology may be on the verge of a significant paradigm shift as there is an increasing awareness that scientists have missed something fundamental as they carry on in their quest for a theory of everything and a theory that unites general relativity with quantum mechanics Knight proposes a new theory suggesting that the space time geometry possesses a complex hierarchical structure that comprises twelve dimensions nine space dimensions and three time

Furthermore this structure is divided into three strata each of which has its own four dimensional structure and stratum specific fundamental forces and parameters with variations in the gravitational constant  $G$  the speed of light  $c$  and the Planck constant Through the pages of this work this theory is further explained

**Stealth Assessment** Valerie Jean Shute, Matthew Ventura, 2013 An approach to performance based assessments that embeds assessments in digital games in order to measure how students are progressing toward targeted goals To succeed in today's interconnected and complex

world workers need to be able to think systemically creatively and critically Equipping K 16 students with these twenty first century competencies requires new thinking not only about what should be taught in school but also about how to develop valid assessments to measure and support these competencies In Stealth Assessment Valerie Shute and Matthew Ventura investigate an approach that embeds performance based assessments in digital games They argue that using well designed games as vehicles to assess and support learning will help combat students growing disengagement from school provide dynamic and ongoing measures of learning processes and outcomes and offer students opportunities to apply such complex competencies as creativity problem solving persistence and collaboration Embedding assessments within games provides a way to monitor players progress toward targeted competencies and to use that information to support learning Shute and Ventura discuss problems with such traditional assessment methods as multiple choice questions review evidence relating to digital games and learning and illustrate the stealth assessment approach with a set of assessments they are developing and embedding in the digital game Newton s Playground These stealth assessments are intended to measure levels of creativity persistence and conceptual understanding of Newtonian physics during game play Finally they consider future research directions related to stealth assessment in education
