Brown Boveri Symposia are by now part of a firmly established tradition. This is the ninth event in a series which was initiated shortly after Corporate Research was created as a separate entity within our Company. The Symposia are held every other year. The themes to date have been: 1969 Flow Research on Blading; 1971 Real Time Control of Electric Power Systems; 1973 High Temperature Materials in Gas Turbines; 1975 Nonemissive Electrooptic Displays; 1977 Current Interruption in High Voltage Networks; 1979 Surges in High Voltage Networks; 1981 Semiconductor Devices for Power Conditioning; 1983 Corrosion in Power Generating Equipment; 1985 Computer Systems for Process Control. Why have we chosen these topics? At the outset we established certain selection criteria: we felt that a subject for a symposium should fulfill the following three requirements: It should characterize a part of a thoroughly scientific discipline; in other words, it should describe an area of scholarly study and research; It should be of current interest in the sense that important results have recently been obtained and considerable research effort is presently underway in the international scientific community; It should bear some relation to the scientific and technological activity of our Company. Let us look at the requirement: current interest. Some of the topics on the list above have been the subject of research for several decades, some even from the very beginning of the century.
