Cat Vims Manual:

Handbook of Multimedia Computing Borko Furht, 1998-09-29 Multimedia computing has emerged as a major area of research. Coupled with high speed networks multimedia computer systems have opened a spectrum of new applications by combining a variety of information sources such as voice, graphics, animation, images, audio, and video. Handbook on Multimedia Computing provides a comprehensive resource on advanced topics in this field, considered here as the integration of four industries: computer, communication, broadcasting, entertainment, and consumer electronics. This indispensable reference compiles contributions from 80 academic and industry leaders examining all the major subsets of multimedia activity. Four parts divide the text. Basic Concepts and Standards introduces basic multimedia terminology, taxonomy, and concepts, including multimedia objects, user interfaces, and standards. Multimedia Retrieval and Processing Techniques addresses various aspects of audio, image, and video retrieval, indexing, and processing techniques and systems. Multimedia Systems and Techniques covers critical multimedia issues such as multimedia synchronization, operating systems for multimedia, multimedia databases, storage organizations, and processor architectures. Multimedia Communications and Networking discusses networking issues such as quality of service, resource management, and video transport. An indispensable reference. Handbook on Multimedia Computing covers every aspect of multimedia applications and technology. It gives you the tools you need to understand and work in this fast-paced, continuously changing field. *Handbook of Internet and Multimedia Systems and Applications* Borko Furht, 1998-12-29 Today multimedia applications on the Internet are still in their infancy. They include personalized communications such as Internet telephone and videophone and interactive applications such as video on demand, videoconferencing, distance learning, collaborative work, digital libraries, radio, and television broadcasting, and others. Handbook of Internet and Multimedia Systems and Applications, a companion to the author's Handbook of Multimedia Computing, probes the development of systems supporting Internet and multimedia applications. Part one introduces basic multimedia and Internet concepts, user interfaces, standards, authoring techniques, and tools, and video browsing and retrieval techniques. Part two covers multimedia and communications systems, including distributed multimedia systems, visual information systems, multimedia messaging, and news systems, conference systems, and many others. Part three presents contemporary Internet and multimedia applications, including multimedia education, interactive movies, multimedia document systems, multimedia broadcasting over the Internet, and mobile multimedia.
