**Nine Algorithms That Changed the Future** John MacCormick, 2020-09-15 Nine revolutionary algorithms that power our computers and smartphones Every day we use our computers to perform remarkable feats A simple web search picks out a handful of relevant needles from the world's biggest haystack Uploading a photo to Facebook transmits millions of pieces of information over numerous error prone network links yet somehow a perfect copy of the photo arrives intact Without even knowing it we use public key cryptography to transmit secret information like credit card numbers and we use digital signatures to verify the identity of the websites we visit How do our computers perform these tasks with such ease John MacCormick answers this question in language anyone can understand using vivid examples to explain the fundamental tricks behind nine computer algorithms that power our PCs tablets and smartphones

**Using Computers in the Translation of Literary Style** Roy Youdale, 2019-06-13 This volume argues for an innovative interdisciplinary approach to the analysis and translation of literary style based on a mutually supportive combination of traditional close reading and distant reading involving corpus linguistic analysis and text visualisation The book contextualizes this approach within the broader story of the development of computer assisted translation including machine translation and the use of CAT tools and elucidates the ways in which the approach can lead to better informed translations than those based on close reading alone This study represents the first systematic attempt to use corpus linguistics and text visualisation in the process of translating individual literary texts as opposed to comparing and analysing already published originals and their translations Using the case study of his translation into English of Uruguayan author Mario Benedetti's 1965 novel *Gracias por el Fuego* Youdale showcases how a close and distant reading approach CDR enhances the translator's ability to detect and measure a variety of stylistic features ranging from sentence length and structure to lexical richness and repetition both in the source text and in their own draft translation thus assisting them with the task of revision The book reflects on the benefits and limitations of a CDR approach its scalability and broader applicability in translation studies and related disciplines making this key reading for translators postgraduate students and scholars in the fields of literary translation corpus linguistics corpus stylistics and narratology
