Early Category and Concept Development : Making Sense of the Blooming, Buzzing Confusion David H. Rakison Assistant Professor of Psychology Carnegie Mellon University, Lisa M. Oakes Associate Professor of Psychology University of Iowa, 2003-01-09 Whether or not infants' earliest perception of the world is a blooming buzzing confusion it is not long before they come to perceive structure and order among the objects and events around them. At the core of this process and cognitive development in general is the ability to categorize to group events, objects or properties together and to form mental representations or concepts that encapsulate the commonalities and structure of these categories. Categorization is the primary means of coding experience underlying not only perceptual and reasoning processes but also inductive inference and language. The aim of this book is to bring together the most recent findings and theories about the origins and early development of categorization and conceptual abilities. Despite recent advances in our understanding of this area a number of hotly debated issues remain at the center of the controversy over categorization. Researchers continue to ask questions such as Which mechanisms for categorization are available at birth and which emerge later? What are the relative roles of perceptual similarity and nonobservable properties in early classification? What is the role of contextual variation in categorization by infants and children? Do different experimental procedures reveal the same kind of knowledge? Can computational models simulate infant and child categorization? How do computational models inform behavioral research? What is the impact of language on category development? How does language partition the world? This book is the first to address these and other key questions within a single volume. The authors present a diverse set of views representing cutting edge empirical and theoretical advances in the field. The result is a thorough review of empirical contributions to the literature and a wealth of fresh theoretical perspectives on early categorization. *Early Category and Concept Development* David H. Language Acquisition and Conceptual Development Melissa Bowerman, Stephen C. Levinson, 2001-01-11 Recent years have seen a revolution in our knowledge of how children learn to think and speak In this volume leading scholars from these rapidly evolving fields of research examine the relationship between child language acquisition and cognitive development At first sight advances in the two areas seem to have moved in opposing directions the study of language acquisition has been especially concerned with diversity explaining how children learn languages of widely different types while the study of cognitive development has focused on uniformity clarifying how children build on fundamental presumably universal concepts This book brings these two vital strands of investigation into close dialogue suggesting a synthesis in which the process of language acquisition may interact with early cognitive development It provides empirical contributions based on a variety of languages populations and ages and theoretical discussions that cut across the disciplines of psychology linguistics and anthropology

Theoretical Nursing Afaf Ibrahim Meleis, 2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice Because of these assumptions most of the

early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories; therefore the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice and others believing it should be driven by research.

Provided by publisher Advanced Maintenance Modelling for Asset Management Adolfo Crespo Márquez, Vicente González-Prida Díaz, Juan Francisco Gómez Fernández, 2017-07-12. This book promotes and describes the application of objective and effective decision making in asset management based on mathematical models and practical techniques that can be easily implemented in organizations. This comprehensive and timely publication will be an essential reference source building on available literature in the field of asset management while laying the groundwork for further research breakthroughs in this field. The text provides the resources necessary for managers, technology developers, scientists, and engineers to adopt and implement better decision making based on models and techniques that contribute to recognizing risks and uncertainties and, in general terms, to the important role of asset management to increase competitiveness in organizations.

Development and Causality Gerald Young, 2011-06-24. This book sets forth a new model of development from a causal perspective. As this is an area vital to several disciplines, it has been written at multiple levels and for multiple audiences. It is based on the work of Piaget and Neo Piagetians but also covers other major models in development.
