**Conceptual metaphor and embodied cognition in science learning** Tamer Amin,Fredrik Jeppsson,Jesper Haglund,2018-10-03 Scientific concepts are abstract human constructions invented to make sense of complex natural phenomena Scientists use specialised languages diagrams and mathematical representations of various kinds to convey these abstract constructions This book uses the perspectives of embodied cognition and conceptual metaphor to explore how learners make sense of these concepts That is it is assumed that human cognition including scientific cognition is grounded in the body and in the material and social contexts in which it is embedded Understanding abstract concepts is therefore grounded via metaphor in knowledge derived from sensory and motor experiences arising from interaction with the physical world The volume consists of nine chapters that examine a number of intertwined themes how systematic metaphorical mappings are implicit in scientific language diagrams mathematical representations and the gestures used by scientists how scientific modelling relies fundamentally on metaphor and can be seen as a form of narrative cognition how implicit metaphors can be the sources of learner misconceptions how conceptual change and the acquisition of scientific expertise involve learning to coordinate the use of multiple implicit metaphors and how effective instruction can build on recognising the embodied nature of scientific cognition and the role of metaphor in scientific thought and learning The volume also includes three extended commentaries

Fuchs,2013-03-09 Based on a course given to beginning physics chemistry and engineering students at the Winterthur Polytechnic Institute this text approaches the fundamentals of thermodynamics from the view of continuum mechanics By describing physical processes in terms of the flow and balance of physical quantities this provides a unified approach to hydraulics electricity mechanics and thermodynamics In this way it becomes clear that the entropy is the fundamental property that is transported in thermal process what in lay terms would be called heat and that the temperature is the corresponding potential The resulting theory of the creation flow and balance of entropy provides the foundation of a dynamical theory of heat Previous knowledge of thermodynamics is not required but the reader should be familiar with basic electricity mechanics and chemistry and should have some knowledge of elementary calculus
