- Force of 40 Newton (West)

### Scalar Quantity

### Displacement

- Displacement represent a vector quantity such as displacement by a single letter,  $\vec{A}$
- This symbol is in **boldface italic type with an arrow** above them, to represent that it have different properties from scalar quantities, the arrow is a reminder that **vectors** have direction.
- Displacement is always a straight-line segment directed from the starting point to the ending point, even though the object's actual path may be curved.
- If two vectors have the same direction, they are **parallel**.
- If they have the same magnitude and the same direction, they are **equal**, no matter where they are located in space.
