mechanics and statistical mechanics the book establishes a general framework for describing condensed phases of matter based on symmetries and conservation laws It explores the role of spatial dimensionality and microscopic interactions in determining the nature of phase transitions as well as discussing the structure and properties of materials with different symmetries Particular attention is given to critical phenomena and renormalization group methods The properties of liquids liquid crystals quasicrystals crystalline solids magnetically ordered systems and amorphous solids are investigated in terms of their symmetry generalised rigidity hydrodynamics and topological defect structure In addition to serving as a course text this book is an essential reference for students and researchers in physics applied physics chemistry materials science and engineering who are interested in modern condensed matter physics *More is Different* Nai-Phuan Ong, Ravin N.

Bhatt, 2001-07-15 This book presents articles written by leading experts surveying several major subfields in Condensed Matter Physics and related sciences The articles are based on invited talks presented at a recent conference honoring Nobel laureate Philip W Anderson of Princeton University who coined the phrase More is different while formulating his contention that all fields of physics indeed all of science involve equally fundamental insights The articles introduce and survey current research in areas that have been close to Anderson's interests Together they illustrate both the deep impact that Anderson has had in this multifaceted field during the past half century and the progress spawned by his insights The contributors cover numerous topics under the umbrellas of superconductivity superfluidity magnetism electron localization strongly interacting electronic systems heavy fermions and disorder and frustration in glass and spin glass systems They also describe interdisciplinary areas such as the science of olfaction and color vision the screening of macroions in electrolytes scaling and renormalization in cosmology forest fires and the spread of measles and the investigation of NP complete problems in computer science The articles are authored by Philip W Anderson Per Bak and Kan Chen G Baskaran Juan Carlos Campuzano Paul Chaikin John Hopfield Bernhard Keimer Scott Kirkpatrick and Bart Selman Gabriel Kotliar Patrick Lee Yoshiteru Maeno Marc Mezard Douglas Osheroff et al H R Ott L Pietronero et al T V Ramakrishnan A Ramirez Myriam Sarachik T Senthil and Matthew P A Fisher B I Shklovskii et al and F Steglich et al **Springer Handbook of Condensed Matter and Materials**
