Gilmer, Katherine C. Wieseman, 2013-02-11 Dr Hedy Moscovici's life on three continents and her battle with ovarian cancer shaped the unique co-learning and participative leadership perspective on science and mathematics education shared in this book. This text has multiple audiences: prospective and practicing teachers wanting to motivate their students to learn science and mathematics; educators mentoring teachers to become transformative intellectuals and critical pedagogues; parents interested in their children's advancement; and interested policymakers and the public wishing to deepen their understanding about learning in general and educational issues in science and mathematics. Two mottos: I can't learn from you if you can't learn from me, and to teach is to learn twice. Summarize the essence of her message. The spotlight is on the critical interdependence of factors: specifically human ability to construct understanding; necessity of disequilibrium to spark neural rewiring; cognition/emotion/pleasure vs pain; even science or math phobia; connections; sociocultural context; dilemma created by the absence of a clearly trustworthy learning meter for a society valuing objective measurement of quality of learning; human relationships sustained by three R's: rights, responsibilities, respect; and heightened awareness of power relationships leading to a spirit of collaboration; recognition of each individual's strengths and expertise; and critical pedagogy.      **A Dictionary of Pharmaceutical Science** Hiram V. **Open Source Library Systems** Robert Wilson, James Mitchell, 2021-09-11 Open source software and applications are all around us and it's no different in today's libraries. Knowing about the open source alternative to integrated library system and being able to make accurate comparisons can save a library tens to hundreds of thousands of dollars a year while more closely matching the library's functional needs. The fact is that the foundational software in place in nearly every industry is being built with open source components. Where software applications are still proprietary or closed, those systems are themselves often built upon open source applications like open source web services, database management systems, programming languages, and operating systems. It's the same story in the library world. Library software providers offering the latest and greatest software solution for many thousands of dollars a year are building these solutions with open source software. However, full-fledged open source applications built with the same underlying technologies are available to libraries at no cost for the software itself. Each of these applications has its own unique and interesting history and communities supporting them. For the reader unfamiliar with open source software or apprehensive about using these applications in their library, this guide introduces the history of open source, demonstrates the global upward trend of adopting open source technologies in general and within libraries in particular, debunks various myths about implementing and using open source technologies, discusses several different types of library information systems including Integrated Library Systems.

Institutional Repositories Digital Asset Management Systems Online Public Access Catalogs Resource Sharing Electronic Resource Management and lastly shares real world experiences in getting started with open source solutions including discussing what systems and services are available and best practices for implementation and use **NBS Building Science Series**, 1975 **Catalog of Copyright Entries.
