

Experiment No.1

Commissioning of the shunt-wound DC machine

Objective:

To operate the shunt- wound machine as a motor

Apparatus:

- Shunt- wound DC machine (Type2701)
- Brake Unit (Type 2719)
- Control unit (type 2730)
- Universal Power Supply (Type2740)
- 2 Multimeters

Introduction:

In a DC Shunt motor, the field winding is connected in parallel (shunt) with the armature. The shunt winding is wound from many turns of small copper wire and since it is connected across the DC field supply, its field current will be constant. The motor will run up to rated speed and this will not be greatly affected by a change in load. The starting torque will be less than a similar sized series motor but if this is not required then a constant speed shunt motor may be preferable for the application.
