**The Protection of Traditional Knowledge at the Frontiers of Drug Discovery** Peter S Harrison, 2024-09-19 This book concerns the often fractious interface between drug discovery and commercialisation environmental degradation the biodiversity crisis the exploitation of indigenous peoples and the destruction of their culture the right to health inequalities of power and the ability of the law to protect knowledge For millennia medicinal plants have provided a trove of treatments for human ailments and the key to that treasure has been the traditional knowledge of the indigenous peoples who have lived alongside these plants More recently that knowledge has been taken often without consent or recompense by Western science as a springboard for the development of pharmaceutical agents As a response to threats to biodiversity and indigenous culture international mechanisms have created or are creating enforceable rights for indigenous peoples to control such knowledge With a background in pharmacology and molecular biology and significant experience as a lawyer in pharmaceutical and biotech patent litigation the author brings a fresh perspective to understanding the difficulties of enforcing such rights and in particular examines whether there is a philosophically justifiable limit to the downstream scope of such rights This book is aimed at all those with an interest in the control of indigenous genetic knowledge and the protection of indigenous culture whether academics anthropologists or pharmaceutical researchers and those seeking to make indigenous rights work as activists legislators or practising lawyers

[Phytochemical Resources for Medicine and Agriculture](#) H.N. Nigg, D. Seigler, 2013-06-29 This book was the result of a symposium held at the American Chemical Society meeting in Miami Beach Florida September 10-15 1989 The symposium was jointly sponsored by The Society for Economic Botany and the American Chemical Society Food and Natural Product sub division There were five speakers During the social sessions mostly over drinks in a hotel room it became obvious that regardless of the discipline we were all speaking the same language Yet prior to the symposium only a few of the participants knew one another We decided to expand the symposium into a book The book would we hoped accomplish for others what we had discovered in ourselves That is the field of Natural Products is broad but similar in techniques and approach ancient but modern and has been and continues to be extremely valuable to humankind We wanted the book to serve as an introductory text for courses and as a reference work for the future We also determined to include the structure of every chemical in the chapter where it was mentioned so the reader would not have to find the structure somewhere else or to try and deduce the structure from the chemical name Little

adulteration and demands for the substitution of pharmacopoeial drugs with locally available ones Pharmacopoeias Drug Regulation and Empires uses the evolution of an imperial pharmacopoeia in Britain as a vehicle for exploring the hegemonic power of European colonial powers in the medical field and the meaning of pharmacopoeia more broadly Making Medicines Stuart Anderson,2005 Making Medicines is a concise chronological discussion of the history of therapeutics and pharmacy from the Egyptians through to the present day It focuses on the discovery and uses of medicines to treat illness through the ages and the evolving role of the pharmacist Each chapter is contributed by an expert in the period or field and illustrates how wider social political and economic developments have influenced drug development and shaped pharmacy practice The book has two colour plate sections illustrating how pharmacy has developed over the centuries Numerous photographs are also included in the text Written by an expert in the field this book will appeal to pharmacists and pharmacy students as well as to other healthcare practitioners and medical historians **Principles and Practice of**
