Eating Behavior and Obesity Shahram Heshmat,2011-06-10 Print CourseSmart **The Association of Patterns of Eating Behavior with Obesity** Thomas E. Moritz,1981 **Dietary Intake, Eating Behavior and Health Outcomes** Rafaela Rosário,Tuyen Van Duong,Ines Fronteira,2023-03-28 The Two-Way Link between Eating Behavior and Brain Metabolism Tanya Zilberter,2016-01-13 This research topic collected and connected information concerning both the underlying metabolic mechanisms and consequences of eating behaviors These two aspects are tremendously important for a better understanding of eating behavior abnormalities as well as for improving education on eating disorders and behaviors

Addictions and Eating Behavior Ramón Sotomayor-Zárate,Claudio Perez-Leighton,2025-04-01 Food intake is associated with brain areas that control hunger satiety motivation for and pleasure caused by the intake of foods These areas integrate to promote the consumption of highly rewarding foods when hungry and stop once sated However the easy access to ultra processed and highly palatable foods has led to the dysregulation of this regulatory system resulting in increased food intake that leads to obesity This condition reinforces the consumption of palatable and energy dense foods and is also related to a higher prevalence of cardiovascular metabolic oncological and neuropsychiatric diseases Feeding is a complex process that involves brain areas that control homeostasis learning memory emotion and reward among others Therefore deregulation of these areas can lead to developing hyperphagia a greater preference for obesogenic foods and in the short or medium term to developing overweight and obesity Furthermore obesity is a pandemic related to a higher prevalence of cardiovascular metabolic oncological and neuropsychiatric diseases among others For this reason this Research Topic focuses on the neurobiological mechanisms that bidirectionally lead to the development of changes in eating behaviors and consuming obesogenic foods Understanding these mechanisms requires an integrative perspective that includes an in depth study of the brain mechanisms that control feeding behaviors and food intake and their integration with different physiological systems i e gastrointestinal neuroendocrine and environmental factors i e food availability and access *Eating Behavior and Food Decision Making in Children and Adolescents* Oh-Ryeong Ha,Seung-Lark Lim,Amanda Schurle Bruce,Travis D. Masterson,Shan Luo,2022-02-23 *Extreme Eating Behaviours* Hubertus Himmerich,Ute Krügel,Ahmad Saedisomeolia,2021-03-03 *Obesity Prevention* Laurette Dube,2010-06-25 Over the years approaches to obesity prevention and treatment have gone from focusing on genetic and other biological factors to exploring a diversity of diets and individual behavior modification interventions anchored primarily in the power of the mind to the recent shift focusing on societal interventions to design temptation proof physical social and economic environments In spite of repeated calls to action including those of the World Health Organization WHO the pandemic continues to progress WHO recently projected that if the current lifestyle trend in young and adult populations around the world persist by 2012 in countries like the USA health care costs may amount to as much as 17 7% of the GDP Most importantly in large part due to the problems of obesity

those children may be the first generation ever to have a shorter life expectancy than that of their parents Obesity Prevention presents the most current research and proposals for addressing the pandemic Past studies have focused primarily on either genetic or behavioral causes for obesity however today s research indicates that a strongly integrated program is the best prospect for success in overcoming obesity Furthermore focus on the role of society in establishing an affordable accessible and sustainable program for implementing these lifestyle changes is vital particularly for those in economically challenged situations who are ultimately at the highest risk for obesity Using studies from both neuroscience and behavioral science to present a comprehensive overview of the challenges and possible solutions The brain to society approach to obesity prevention focuses on what is needed in order to sustain a healthy pleasurable and affordable lifestyle Explores the brain to society approach to obesity prevention focusing on an integrative approach to addressing the obesity pandemic Presents both the nueroscientific and the behavioral factors that impact eating habits Identifies the challenges and suggests solutions for altering attitudes toward food on both an individual and a societal level

Eating Behavior and Mental Health during the COVID-19 Pandemic José Aparecido Da Silva,Jonas Augusto Cardoso da Silveira,2024-03-18 **Assessment of**

Eating Behavior Adrian Meule,2023-05-08 Eating behavior encompasses a broad range of aspects from under to overeating and from normal to pathological eating The expert contributors to this volume provide a comprehensive overview of assessment methods for eating behavior research and clinical practice which include both self report questionnaires and structured interviews as well as assessment of food intake in the laboratory ecological momentary assessment cognitive behavioral tasks and psychophysiological measures They explore the assessment of eating disorders such as anorexia nervosa bulimia nervosa binge eating disorder and others They also address topics that may be associated with disordered eating and obesity but are also relevant in persons without these conditions such as restrained eating and dieting emotional eating food craving and food addiction orthorexia nervosa intuitive and mindful eating and grazing Further topics that are strongly connected to eating behavior such as body image physical activity body composition and expenditure food neophobia and disgust sensitivity and weight related stigmatization are also examined This book is essential reading for researchers working in clinical and health psychology consumer psychology psychiatry and nutrition science as well as practitioners including psychotherapists physicians nutrition counsellors who assess eating behavior and related aspects in their daily work

The Goal Conflict Model of Eating Behavior Wolfgang Stroebe,2017-10-16 In the World Library of Psychologists series international experts present career long collections of what they judge to be their finest pieces extracts from books key articles salient research findings and their major practical theoretical contributions In this volume Overweight and obesity rates have increased dramatically in most industrialized countries even though more and more people are chronically dieting Dieters can manage to lose substantial amounts of weight while actively dieting but most regain it within a few years So why do most chronic dieters have such difficulty controlling their weight and why is there only a small minority of

successful dieters To address these questions Stroebe developed the goal conflict model of eating behavior a social cognitive theory that attributes the difficulty of chronic dieters to a conflict between two incompatible goals eating enjoyment and weight control Although chronic dieters are motivated to pursue their weight control goal most fail in food rich environments Surrounded by palatable food cues that activate thoughts of eating enjoyment incompatible weight control thoughts are inhibited and weight control intentions are forgotten For successful dieters probably due to past success in exerting self control tasty high calorie food has become associated with weight control thoughts For them exposure to palatable food makes weight control thoughts more accessible enabling them to control their body weight in food rich environments This book contains the key articles of a research program by Stroebe and collaborators to assess the validity of this theory They succeeded in tracing the processes that lead from temptation to a breakdown of dieting intentions They also demonstrated that these theoretical principles can be used to develop effective weight loss interventions The book should be of value for all researchers students and clinicians involved in obesity research and treatment

Food Addiction, Obesity, and Disorders of Overeating Claire E. Wilcox,2021-09-30 This book is written for providers of broad training backgrounds and aims to help those who care for people with EDs overweight and obesity provide evidence based care The goal of the book is to provide these providers with a straightforward resource summarizing the current standard of care However it goes further by also introducing the concept of food addiction FA as a model to understand some forms of overeating This book discusses the pros and cons of embracing FA and reviews the evidence for and against the validity and utility of FA By doing so the chapters convey a middle ground approach to help people with obesity BED and bulimia nervosa plus FA symptomatology who also want to lose weight The text discusses FA by reviewing several of the main ongoing controversies associated with the construct It reviews both the clinical and neuroscientific evidence that some individuals eating behavior mirrors that seen in substance use disorders SUD such as how their relationship with food appears to be addictive Chapters also discuss how many of the mechanisms known to underlie SUDs appear to drive overeating in animal models and humans Finally the text argues that the similarities between the brain mechanisms of addictive disorders and overeating behavior has the potential to open up new avenues for current treatment and treatment development Food Addiction Obesity and Disorders of Overeating An Evidence Based Assessment and Clinical Guide is suited for both medical and mental health practitioners including physicians in primary care or psychiatry nurses psychologists social workers medical students and medical residents It could also be utilized by researchers in obesity and ED fields stimulating ideas for future research and study design

Pediatric Food Preferences and Eating Behaviors Julie C. Lumeng,Jennifer O. Fisher,2018-07-04 Pediatric Food Preferences and Eating Behaviors reviews scientific works that

investigate why children eat the way they do and whether eating behaviors are modifiable The book begins with an introduction and historical perspective and then delves into the development of flavor preferences the role of repeated exposure and other types of learning the effects of modeling eating behavior picky eating food neophobia and food selectivity Other sections discuss appetite regulation the role of reward pathways genetic contributions to eating behaviors environmental influences cognitive aspects the development of loss of control eating and food cognitions and nutrition knowledge Written by leading researchers in the field each chapter presents basic concepts and definitions methodological issues pertaining to measurement and the current state of scientific knowledge as well as directions for future research Delivers an up to date synthesis of the research evidence addressing the development of children s eating behaviors from birth to age 18 years Provides an in depth synthesis of the basic eating behaviors that contribute to consumption patterns Translates the complex and sometimes conflicting research in this area to clinical and public health practice Concludes each chapter with practical implications for practice Presents the limits of current knowledge and the next steps in scientific inquiry
