### Astronomy – 1.1

1. 1.1.1 What does the geocentric model of the solar system look like?  
**EARTH AT THE CENTER OF THE SOLAR SYSTEM**
2. 1.1.1 What is the theory that the Solar System developed from a cloud of dust and gas?  
**NEBULAR HYPOTHESIS**
3. 1.1.1 At what point is Earth closest to the sun?  
**PERHELION**
4. 1.1.1 What are the inner planets vs terrestrials?  
**TERRESTRIAL – CLOSEST TO THE SUN, example: MERCURY, VENUS, EARTH, MARS  
Jovian – FURTHEST FROM THE SUN, example: JUPITER, SATURN, URANUS, NEPTUNE**
5. 1.1.2 What is responsible for the seasonal changes on earth?

**THE COMBINED EFFECTS OF GRAVITATIONAL FORCES EXERTED BY THE MOON, SUN, AND THE ROTATION OF THE EARTH**
7. 1.1.2 What causes earth to experience days and years?  
**DAYS ARE DUE TO THE SPIN OF THE EARTH ON ITS AXIS. ROTATIONS AND YEARS ARE DUE TO THE EARTH MOVING AROUND THE SUN IN AN ELLIPTICAL ORBIT (REVOLUTION)**
8. 1.1.2 Why is the circumference of the earth larger at the equator than the poles?  
**IT IS A RESULT OF GRAVITY AND ITS ROTATION**
9. 1.1.2 What is fusion?  
**IT IS THE PROCESS THAT POWERS THE SUN AND THE STARS. IT'S THE REACTION OF TWO ATOMS OF HYDROGEN COMING TOGETHER – OR FUSE, TO FORM AN ATOM OF HELIUM. IN THE PROCESS SOME OF THE MASS OF HYDROGEN IS CONVERTED TO ENERGY.**
10. 1.1.2 What is fission?  
**Fission is a nuclear process in which a heavy nucleus splits into two smaller nuclei. An example of a fission reaction that was used in the first atomic bomb and is still used in nuclear reactors**
11. 1.1.2 What process produces radiant energy in stars?  
**FUSION**
12. 1.1.4 What causes the differential heating of Earth's surface differences in land and water?  
**WATER HEATS UP AND COOLS MORE SLOWLY THAN LAND. 2/3'S OF THE EARTH'S SURFACE IS COVERED BY WATER. THIS CAUSES THE NORTHERN AND SOUTHERN HEMISPHERES TO HAVE DIFFERENT AVERAGE TEMPS.**

**Climate Change in Cities** Sara Hughes, Eric K. Chu, Susan G. Mason, 2017-09-27 This book presents pioneering work on a range of innovative practices experiments and ideas that are becoming an integral part of urban climate change governance in the 21st century Theoretically the book builds on nearly two decades of scholarships identifying the emergence of new urban actors spaces and political dynamics in response to climate change priorities However it further articulates and applies the concepts associated with urban climate change governance by bridging formerly disparate disciplines and approaches Empirically the chapters investigate new multi level urban governance arrangements from around the world and leverage the insights they provide for both theory and practice Cities both as political and material entities are increasingly playing a critical role in shaping the trajectory and impacts of climate change action However their policy planning and governance responses to climate change are fraught with tension and contradictions While on one hand local actors play a central role in designing institutions infrastructures and behaviors that drive decarbonization and adaptation to changing climatic conditions their options and incentives are inextricably enmeshed within broader political and economic processes Resolving these tensions and contradictions is likely to require innovative and multi level approaches to governing climate change in the city new interactions new political actors new ways of coordinating and mobilizing resources and new frameworks and technical capacities for decision making We focus explicitly on those innovations that produce new relationships between levels of government between government and citizens and among governments the private sector and transnational and civil society actors A more comprehensive understanding is

needed of the innovative approaches being used to navigate the complex networks and relationships that constitute contemporary multi level urban climate change governance Debra Roberts Co Chair Working Group II IPCC 6th Assessment Report AR6 and Acting Head Sustainable and Resilient City Initiatives Durban South Africa Climate Change in Cities offers a refreshingly frank view of how complex cities and city processes really are Christopher Gore Associate Professor and Chair Department of Politics and Public Administration Ryerson University Canada This book is a rare and welcome contribution engaging critically with questions about cities as central actors in multilevel climate governance but it does so recognizing that there are lessons from cities in both the Global North and South Harriet Bulkeley Professor of Geography Durham University United Kingdom This timely collection provides new insights into how cities can put their rhetoric into action on the ground and explores just how this promise can be realised in cities across the world from California to Canada India to Indonesia

**Digital Technologies and Institutions for Sustainable Development** Aleksei V. Bogoviz, Elena G. Popkova, 2022-10-11

This book focuses on digital institutions and the advanced technologies used on their basis as well as their contribution to sustainable development in the unity of seventeen SDGs formulated by the UN which is sequentially disclosed in six parts of the book This book is dedicated to comprehensive coverage of the role of the digital economy in sustainable development and the offering of a set of scientific methodological and practical recommendations to increase the scale and effectiveness of this role The first part explores the training of digital personnel for sustainable development the second part reveals the regional features of Russia and the third part describes the industry specifics of using digital technologies in entrepreneurship in support of sustainable development The fourth part deals with financial organizational and managerial issues of using digital technologies in entrepreneurship in support of sustainable development the fifth part is devoted to security international factors and risks and the sixth part deals with the legal framework and state regulation of digital technologies and sustainable development institutions The novelty of the book lies in its reliance on an institutional approach that allows rethinking and systematically studying the contribution of the digital economy to sustainable development The book is aimed at scholars who will find in it an institutional understanding of the digital economy's support for sustainable development and ways to improve it The secondary target audience of the book is the subject of managing the sustainable development of the digital economy For them the book contains relevant and illustrative examples from practice and applied recommendations

Greenberg,2016-05-18 Offers overview of applications of geosciences to sustainable development and geophilanthropic efforts worldwide and offers advice to guide creation of development projects Primacy of geologic input to all development activities is highlighted along with problems that are encountered and environmental issues that must be addressed **Using Graywater and Stormwater to Enhance Local Water Supplies** National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Water Science and Technology Board,Committee on the Beneficial Use of Graywater and Stormwater: An Assessment of Risks, Costs, and Benefits,2016-07-30 Chronic and episodic water shortages are becoming common in many regions of the United States and population growth in water scarce regions further compounds the challenges Increasingly alternative water sources such as graywater untreated wastewater that does not include water from the toilet but generally includes water from bathroom sinks showers bathtubs clothes washers and laundry sinks and stormwater water from rainfall or snow that can be measured downstream in a pipe culvert or stream shortly after the precipitation event are being viewed as resources to supplement scarce water supplies rather than as waste to be discharged as rapidly as possible Graywater and stormwater can serve a range of non potable uses including irrigation toilet flushing washing and cooling although treatment may be needed Stormwater may also be used to recharge groundwater which may ultimately be tapped for potable use In addition to providing additional sources of local water supply harvesting stormwater has many potential benefits including energy savings pollution prevention and reducing the impacts of urban development on urban streams Similarly the reuse of

graywater can enhance water supply reliability and extend the capacity of existing wastewater systems in growing cities. Despite the benefits of using local alternative water sources to address water demands, many questions remain that have limited the broader application of graywater and stormwater capture and use. In particular, limited information is available on the costs, benefits, and risks of these projects, and beyond the simplest applications, many state and local public health agencies have not developed regulatory frameworks for full use of these local water resources. To address these issues, *Using Graywater and Stormwater to Enhance Local Water Supplies* analyzes the risks, costs, and benefits on various uses of graywater and stormwater. This report examines technical, economic, regulatory, and social issues associated with graywater and stormwater capture for a range of uses, including non-potable urban uses, irrigation, and groundwater recharge. *Using Graywater and Stormwater to Enhance Local Water Supplies* considers the quality and suitability of water for reuse, treatment, and storage technologies, and human health and environmental risks of water reuse. The findings and recommendations of this report will be valuable for water managers, citizens of states under a current drought, and local and state health and environmental agencies.
