The documents are arranged in a somewhat overlapping, diagonal fashion, creating a sense of depth and historical context. The colors are muted, with browns, tans, and greys dominating the palette.

The Mathematical Writings of Évariste Galois Évariste Galois, Peter M. Neumann, 2011 Before he died at the age of twenty shot in a mysterious early morning duel at the end of May 1832 Evariste Galois created mathematics that changed the direction of algebra This book contains English translations of almost all the Galois material The translations are presented alongside a new transcription of the original French and are enhanced by three levels of commentary An introduction explains the context of Galois work the various publications in which it appears and the vagaries of his manuscripts Then there is a chapter in which the five mathematical articles published in his lifetime are reprinted After that come the testamentary letter and the first memoir in which Galois expounded on the ideas that led to Galois Theory which are the most famous of the manuscripts These are followed by the second memoir and other lesser known manuscripts This book makes available to a wide mathematical and historical readership some of the most exciting mathematics of the first half of the nineteenth century presented in its original form The primary aim is to establish a text of what Galois wrote The details of what he did the proper evidence of his genius deserve to be well understood and appreciated by mathematicians as well as historians of mathematics

Differential Equations Marcelo Viana, José M. Espinar, 2021-12-07 This graduate level introduction to ordinary differential equations combines both qualitative and numerical analysis of solutions in line with Poincaré's vision for the field over a century ago Taking into account the remarkable development of dynamical systems since then the authors present the core topics that every young mathematician of our time pure and applied alike ought to learn The book features a dynamical perspective that drives the motivating questions the style of exposition and the arguments and proof techniques The text is organized in six cycles The first cycle deals with the foundational questions of existence and uniqueness of solutions The second introduces the basic tools both theoretical and practical for treating concrete problems The third cycle presents autonomous and non autonomous linear theory Lyapunov stability theory forms the fourth cycle The fifth one deals with the local theory including the Grobman Hartman theorem and the stable manifold theorem The last cycle discusses global issues in the broader setting of differential equations on manifolds culminating in the Poincaré Hopf index theorem The book is appropriate for use in a course or for self study The reader is assumed to have a basic knowledge of general topology linear algebra and analysis at the undergraduate level Each chapter ends with a computational experiment a diverse list of exercises and detailed historical biographical and bibliographic notes seeking to help the reader form a clearer view of how the ideas in this field unfolded over time
