Cybernetics Or Control And Communication In The Animal And The Machine:

Cybernetics Or Control and Communication in the Animal and the Machine Norbert Wiener, 1961 It appears impossible for anyone seriously interested in our civilization to ignore this book. It is a must book for those in every branch of science in addition economists politicians statesmen and businessmen cannot afford to overlook cybernetics and its tremendous even terrifying implications

Cybernetics; Or, Control and Communication in the Animal and the Machine Norbert Wiener, 1948 **Cybernetics, Or, Control and Communication in the Animal and the Machine** Norbert Wiener, 2011

Cybernetics, 1969 *Cybernetics or Control and Communication in the Animal and the Machine, Reissue of the 1961 second edition* Norbert Wiener, 2019-10-08 A classic and influential work that laid the theoretical foundations for information theory and a timely text for contemporary information theorists and practitioners. With the influential book *Cybernetics* first published in 1948, Norbert Wiener laid the theoretical foundations for the multidisciplinary field of cybernetics: the study of controlling the flow of information in systems with feedback loops, be they biological, mechanical, cognitive, or social. At the core of Wiener's theory is the message: information sent and responded to; feedback; the functionality of a machine, organism, or society depends on the quality of messages. Information corrupted by noise prevents homeostasis or equilibrium. And yet *Cybernetics* is as philosophical as it is technical, with the first chapter devoted to Newtonian and Bergsonian time and the philosophical mixed with the technical throughout. This book brings the 1961 second edition back into print with new forewords by Doug Hill and Sanjoy Mitter. Contemporary readers of *Cybernetics* will marvel at Wiener's prescience: his warnings against noise; his disdain for hucksters and gadget worshipers; and his view of the mass media as the single greatest anti-homeostatic force in society. This edition of *Cybernetics* gives a new generation access to a classic text. *Cybernetics* Norbert Wiener. Scan, 2025-01-30 *Cybernetics Or the Control and Communication in the Animal and the Machine* by Norbert Wiener is a seminal work that laid the foundation for the field of cybernetics. This book is widely regarded as one of the most influential contributions to the study of systems, communication, and control mechanisms across biological, mechanical, and computational domains. The book is dense with mathematical formulations and examples but also includes conceptual discussions accessible to non-specialists. It begins with an introduction to the core principles and gradually moves into detailed applications and implications. In an era where systems thinking and artificial intelligence are central to innovation, *Cybernetics* remains a cornerstone for understanding how systems operate, communicate, and adapt. Its emphasis on feedback loops and interdisciplinary approaches continues to resonate in both theoretical and practical contexts. **Cybernetics, Or Control and Communication in the Animal and the Machine. including landscape architecture and may have provided transformative frameworks to understand this entangled reality. However, design still entails a sense of intentionality and an urge to control. How do we then address the tension between the designer's intentionality and the co-produced reality of more than human agents in the cybernetic environment? Is posthumanism enough to develop a framework to think beyond our all too human ways of thinking? For researchers, scholars, practitioners, and students in environmental design and engineering disciplines, this book maps out a paradigm of environmentalism and ecological design rooted in non-communication and uncontrollability and puts a speculative turn on cybernetics.
