HEART RATE
The heart rate is the number of times the heart beats per minute. It is measured by counting the number of QRS complexes in a 6-second interval and multiplying by 10.

PR INTERVAL
The PR interval is the time between the P wave and the QRS complex. It represents the time it takes for the electrical impulse to travel from the atria to the ventricles.

QT INTERVAL
The QT interval is the time between the start of the QRS complex and the end of the T wave. It represents the time it takes for the ventricles to repolarize.

QTc INTERVAL
The QTc interval is the corrected QT interval, which is adjusted for the heart rate. It is calculated using the Bazett formula: $QTc = \frac{QT}{\sqrt{RR}}$, where QT is the QT interval in milliseconds and RR is the heart rate in beats per minute.

Normal ECG
A normal ECG shows a regular rhythm with a heart rate between 60 and 100 beats per minute. The P wave is upright and followed by a narrow QRS complex. The T wave is upright and follows the QRS complex.

Abnormal ECG
An abnormal ECG shows a heart rate that is too fast (tachycardia) or too slow (bradycardia). It may also show irregular rhythms, such as atrial fibrillation or ventricular tachycardia. Other abnormalities include ST-segment depression or elevation, which may indicate a heart attack.

ECG Interpretation
The ECG is a valuable tool for diagnosing heart disease. It can be used to identify abnormal heart rhythms, heart failure, and other conditions. The ECG is also used to monitor the effectiveness of treatment for heart disease.

ECG and Heart Disease
