*Tadpole Hunter* Arnold Cooke, 2023-08-15. This book describes the history of amphibian conservation and research in Britain. It is packed with unique insights from the author who in the late 1960s was probably Britain's first professional amphibian conservationist. At that time, the situation for amphibians was extremely serious after three decades of population decline. Up to the 1990s, Arnold Cooke was directly involved in understanding and trying to remedy the situation via research, legislation, and active conservation. He initiated long-term monitoring, surveillance, and studies that continued well into this century. This research developed and utilised simple monitoring techniques such as counting breeding newts at night or toads dead on roads. The resulting datasets also proved of value in determining whether breeding behaviour was affected by climate change. This personal overview charts in detail how amphibian conservation developed from a relatively low knowledge base with few individuals involved to an abundance of information available for the many groups of people now active in the field. It includes published, unpublished, and no longer readily accessible material to emphasise how contemporary knowledge, attitudes, and resources affected what was done and what happened as a result. Various policies, strategies, laws, and other initiatives have helped stop or slow declines, but the future is still uncertain. The book will appeal to a broad readership from naturalists to professional herpetologists. Furthermore, this story will have relevance for amphibian conservation in other countries in light of their more recent widespread declines. It is also of interest to those wanting to know more about the development of wildlife conservation in Britain.

*Naturalized Reptiles and Amphibians of the World* Christopher Lever, 2003. This book describes how the various alien reptiles and amphibians now living in the wild throughout the world were first introduced, how they subsequently became naturalized, their present distribution and status in those countries to which they were introduced, and their ecological and socio-economic impact, if any, on the native biota and local economies. Many species have had a more or less neutral impact, being neither beneficial nor harmful. However, several have had a positive ecological or socio-economic impact, while some such as the cane toad have had an extremely destructive effect. The criteria for inclusion of a species are that it should have been imported from its natural range to a new country by human agency, either accidentally or deliberately, and that it should currently be established in the wild in self-maintaining and self-perpetuating populations unsupported by and independent of mankind.
